

New Eastman Tritan™ copolyester. The flexibility to adapt to your imagination.

EASTMAN

Now there's a new way to make your ideas come alive. Tritan™, a new-generation copolyester, offers innovative design and application possibilities. It's a compelling alternative to traditional polymers, including polycarbonate. *Tritan* balances easy processing with a mix of performance properties, including clarity, toughness, heat resistance and chemical resistance. Let *Tritan* embolden your thinking, expand your design options, improve your production processes and differentiate your products. Find out more at www.eastman.com/tritan.

New *Tritan*. How can it transform your business?

New Eastman Tritan™ Copolyester.

The ability to transform your thinking.

Eastman Tritan™, a new-generation copolyester, is a significant breakthrough that helps you differentiate your clear or color products through design and performance.

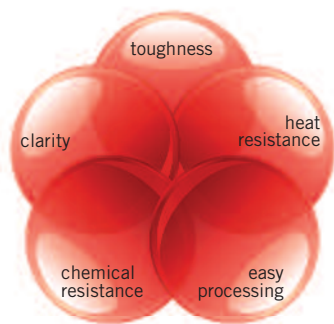

Tritan retains the versatility of copolyesters. But it also can offer unexpected advantages, including:

- Even higher temperature resistance
- Higher impact resistance

Tritan will reshape your expectations for clear polymers.

The unique properties of *Tritan* deliver performance that is often superior to other clear thermoplastics, such as polycarbonate (PC), in areas such as:

- Lower levels of residual stress
- Chemical resistance
- Clarity
- Toughness
- Ease of processing
- Ease of thermoforming

Transform your market potential without transforming your operation.

Tritan can open a whole new world of design freedom and product durability. But it also can be a drop-in replacement for PC in many existing injection molding and thermoforming processes — often with no capital investment and lower system costs.

***Tritan* and an open mind are sure to open new market opportunities for you.**

Tritan is a powerful tool for enhancing existing products — or creating dramatic new solutions. Open your mind to a practical new way to produce innovative, creative products — and create a higher level of customer satisfaction.
