Eastman SANTOFLEX™

antidegradants

Eastman Santoflex™ antidegradants (PPDs) prevent premature aging and degradation of rubber from ozone and oxygen as well as fatigue and heat. Degrading rubber results in reduced flexibility and a shorter service life for finished parts. As a leading supplier of antidegradants to the tire industry, Eastman holds a series of patents for its innovative manufacturing process of the key intermediate used to manufacture Santoflex, which is known for its reliability and consistency.

Santoflex antidegradants offer:

- Ozone resistance
- Extended flexibility
- Fatigue resistance
