electronic chemicals

For the Electronics Industry ...

Technical development in the electronics industry (printed circuit boards and assemblies, liquid crystal displays, and semiconductors) continues on a fast pace. The higher-memory computer chips and smaller sizes of electronic products have driven the demand for high-purity chemicals used in many processing steps. Eastman Chemical Company has recognized these needs and is offering a family of products called Eastman EastaPure™ electronic chemicals.

Trace Element Analysis

A class 1000 clean room containing class 10 hoods has been established to measure the metal ion content in EastaPure™ electronic chemicals at parts-per-billion levels on an Inductively Coupled Plasma Mass Spectrometer (ICP-MS). This facility allows Eastman to provide certificate of analysis (COA) on a round-the-clock basis.

Handling/Packaging

Proper handling is required to deliver high-purity chemicals to the semiconductor industry. Special packaging containers are used for drum, bulk (isotainers), and tank truck orders. To minimize contamination, special handling is maintained throughout the entire loading and storage process.
