

Eastman copolyesters and approved additives receive Material Health Certificate

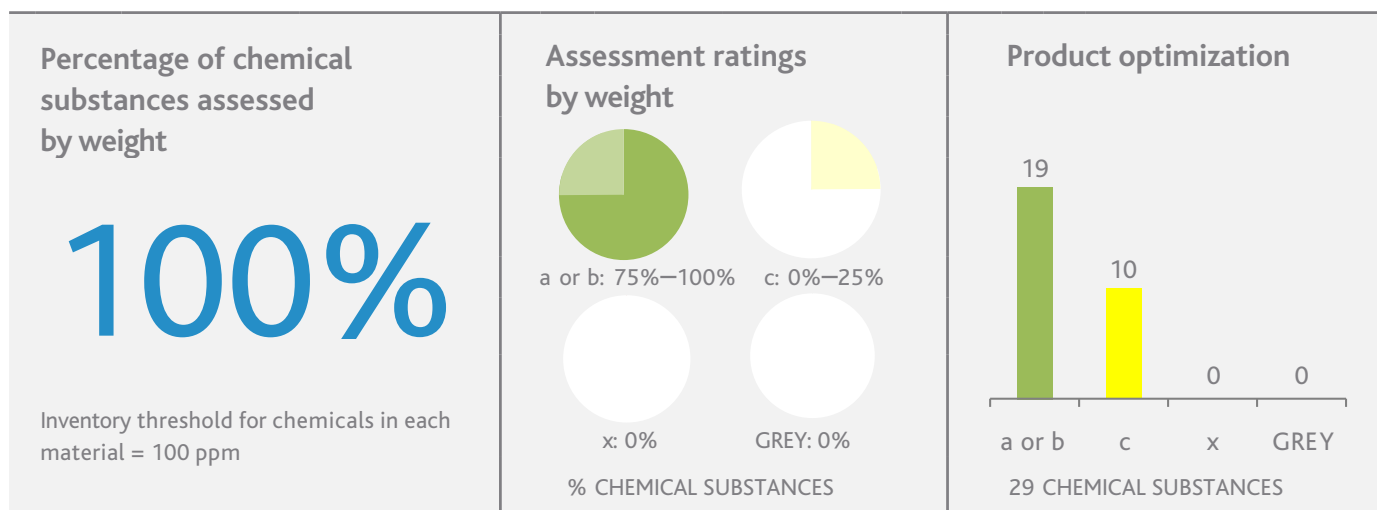

Many Eastman copolyesters have a Platinum level Material Health Certificate based on the Material Health requirements of Version 3.1 of the *Cradle to Cradle Certified™* Product Standard.

The Cradle to Cradle Certified™ Material Health Assessment Methodology is a contextual assessment based on chemical hazard identification and qualitative exposure considerations during a product’s final manufacture, use, and end of use. The exposure assessment is highly simplified and more conservative compared to a conventional, quantitative risk assessment. The Material Health Certificate is awarded to products assessed against the requirements in the Material Health category of the *Cradle to Cradle Certified™* Product Standard.

Product optimization summary

- ✓ *Cradle to Cradle Certified™* Banned List compliant
- ✓ Material Health optimization strategy not required
- ✓ No exposure from carcinogens, mutagens, or reproductive toxicants
- ✓ VOC emissions testing not required for this product type
- ✓ Product is fully optimized—does not contain any GREY or x-assessed chemicals
- ✓ Process chemicals have been identified and none are GREY or x-assessed
