RE: 2021 Annual Groundwater Detection Monitoring and
Corrective Action Effectiveness Report
Solutia Inc., Anniston, Alabama
EPA RCRA ID #ALD004019048; EPA CERCLA ID #ALD000400123
Docket No. 1:02-cv-0749-KOB

Dear Ms. Favors:

Please find attached an electronic copy of the above-referenced report. This report is submitted in compliance with the requirements of condition II.B.6 of the Facility's RCRA Post-Closure Permit and the Interim Record of Decision for Operable Unit 3 of the Anniston PCB Site. If you should have any questions or need additional information, please call me at (256) 231-8404.

Sincerely,

A handwritten signature in blue ink, appearing to read "E. Macolly", is written over a blue circular stamp or seal.

E. Gayle Macolly
Manager, Remedial Projects
Solutia Inc.

2021 ANNUAL GROUNDWATER DETECTION MONITORING AND CORRECTIVE ACTION EFFECTIVENESS REPORT

Solutia Inc., Anniston, Alabama
RCRA Post-Closure Permit ALD 004 019 048
Consent Decree Docket No. 1:02-ec-0749-KOB

1.0 EXECUTIVE SUMMARY

1.1 Basis for Annual Report

This report has been prepared to document the results of groundwater monitoring and corrective action during 2021 at the Solutia Inc. (Solutia) facility in Anniston, Alabama (see Figure 1). Groundwater monitoring and corrective actions are being conducted at Operable Unit 3 (OU-3) in accordance with the: i) RCRA Post-Closure Permit No. ALD 004 019 048 issued by the Alabama Department of Environmental Management (ADEM) on 19 July 2019; and ii) Consent Decree (CD) issued by the US Environmental Protection Agency (USEPA) Region 4 on 17 April 2013 and the associated Interim Record of Decision (IROD) and Remedial Action (RA) Work Plan required pursuant to CERCLA. This report describes the requirements for groundwater monitoring and corrective action efforts and documents the progress achieved regarding these activities during the calendar year 2021.

1.2 Summary of Findings

Groundwater monitoring conducted during 2021 has demonstrated that the RCRA corrective action program and the CERCLA remedial action are being implemented in accordance with applicable requirements as summarized below. The monitoring well network and corrective action systems are depicted on Figures 2 and 3, respectively.

- **RCRA Groundwater Detection Monitoring:** At WMA I (South Landfill Cells 4E and 5E), semi-annual groundwater sampling and testing during 2021 have demonstrated that no release has occurred from the unit.
- **RCRA Groundwater Corrective Action:** At WMA II (New Limestone Bed) and SWMU 1 (South Landfill), semi-annual groundwater sampling and testing have demonstrated that operation of groundwater recovery systems is successfully intercepting affected groundwater. Statistical trend analysis of groundwater monitoring data shows that concentrations of Constituents of Concern (COCs) are generally stable or decreasing, thereby indicating the effectiveness of the groundwater recovery efforts.
- **CERCLA Remedial Action (RA):** Groundwater pump-and-treat systems are currently recovering and treating affected groundwater at Corrective Action Areas near monitoring wells OW-21A and OW-10 (see Figure 4). Groundwater monitoring, which is conducted annually in the vicinity of these wells and at other select locations throughout OU-3, demonstrates that COC concentrations are

generally consistent with the prior four years of CERCLA RA monitoring. Concentration trends indicate primarily stable to decreasing conditions for COCs at the CERCLA RA monitoring wells.

1.3 Report Organization

This report is organized as follows: the facility background is provided in section 2.0, an overview of the groundwater monitoring program is discussed in section 3.0, an evaluation of the groundwater monitoring results is presented in section 4.0, and the evaluation of corrective actions is included in section 5.0. Tables 1 through 8 summarize technical data associated with the monitoring program, and Figures 1 through 19 provide illustrative summaries of the groundwater monitoring results. Supporting information is included in Appendices A through H.

2.0 FACILITY BACKGROUND

2.1 General Facility Description

OU-3 extends over an approximate 155-acre area located about one mile west of downtown Anniston, Alabama (see Figure 1). The manufacturing area comprises the northern portion of the OU-3 area and encompasses approximately 68 acres. The manufacturing portion of OU-3 is bounded to the north by the Norfolk Southern railroad (formerly the Georgia Pacific railway), to the east by Clydesdale Avenue, to the west by the closed West End Landfill and an Alabama Power Company substation and to the south by Highway 202. OU-3 also includes the South Landfill located on the south side of Highway 202 and the northside properties area located north of the manufacturing area.

Solutia currently manufactures polyphenyl compounds and phosphate ester-based nonflammable hydraulic fluids under the authorization of applicable environmental permits. Environmental activities at the facility have included a combination of investigative and remedial efforts conducted pursuant to these permits.

2.2 Closed Units and Corrective Action Areas

This annual groundwater monitoring report addresses closed waste management units and corrective action areas identified in the RCRA permit and the IROD. The facility previously operated the following hazardous waste management and/or disposal areas (see Figure 3):

- WMA I: Closed Cells 4E and 5E of the South Landfill;
- WMA II: New Limestone Bed; and
- SWMU 1: Closed Cells 1W, 2W, 2WA, 3W, 4W, 1E, 2E, and 3E of the South Landfill.

2.2.1 WMA I: Closed Cells 4E and 5E (northeastern portion of South Landfill)

Closed Cells 4E and 5E of the South Landfill have been designated as WMA I. Cells 4E and 5E represent two of the ten cells comprising the South Landfill. The disposal unit was used for the disposal of ruffage (i.e., general trash) generated within the parathion and para-nitrophenol production areas. The general trash included, among other wastes, discarded empty used fiber drums, empty used sample containers, rubber overshoes, gloves, filter papers, etc., which potentially contained residues of parathion, methyl parathion, and/or para-nitrophenol (PNP). Occasionally, spill residues from the clean-up of these same materials were disposed in these cells.

These wastes were considered hazardous by characteristic as listed pursuant to ADEM Administrative Code 335-14-2-.04(4)(e, f): discarded commercial chemical products, off-specification species, container residues and spills of parathion (P089), methyl parathion (P071), and p-nitrophenol (U170). These wastes were collected in dumpsters located at various points within the manufacturing area.

WMA I was closed in compliance with provisions contained in an operating permit issued under the Alabama Hazardous Waste Management and Minimization Act (AHWMMA) and RCRA.

No release to groundwater has been documented from WMA I. A series of groundwater monitoring wells is located hydraulically downgradient of the unit to detect any potential release from the unit to groundwater.

2.2.2 WMA II: New Limestone Bed

WMA II, also known as the New Limestone Bed, was used as a surface impoundment for treatment of characteristically hazardous waste. The unit was not used for waste disposal. WMA II was employed to partially neutralize an aqueous process wastewater stream, having the characteristic of corrosivity (D002) prior to biological treatment in the on-site industrial wastewater treatment system. Additionally, as a matter of convenience, the column bottoms from an acetone recovery distillation column (F003) flowed through this surface impoundment. As with WMA I, WMA II was closed in compliance with provisions contained in an operating permit issued under the AHWMMA and RCRA. A series of interceptor wells located near the northern boundary of OU-3 addresses a release to groundwater in WMA II.

2.2.3 SWMU 1: South Landfill

The South Landfill was operated from 1960 to 1988 and included ten individual closed disposal cells (i.e., 1W, 2W, 2WA, 3W, 4W, 1E, 2E, 3E, 4E, and 5E). As noted above, Cells 4E and 5E have been designated as WMA I. The remaining cells have been designated as SWMU 1, which has been referred to EPA as noted in Table IV.4 of the current RCRA permit.

Interim corrective measures were constructed to prevent transport of affected soils from the South Landfill. These measures included the installation of a multi-layer cap and drainage controls over the waste, with a clay and vegetative cap around the disposal areas. As part of the CERCLA RA work, the caps atop cells 1E, 2E, and 3E (referred to as the PCB cells) of the South Landfill were upgraded to be compliant with the provisions of RCRA, 42 U.S.C. §6901 et seq. (1976) Subtitle C during the period of mid-2015 to early 2016 (Solutia, 2017b).

At Cell 3E, water from a pre-existing seep was observed emanating from beneath the cap following construction in 2016. A seep collection, conveyance, and treatment system were installed in 2018 to collect water from beneath the cap. The system has been upgraded periodically to increase capacity and reduce iron fouling.

A series of interceptor wells (IWs) located north of the unit (including well IW-14A to the west of Clydesdale Blvd.) addresses a release to groundwater in SWMU 1 (see Figure 4).

2.2.4 CERCLA Remedial Action Corrective Action Areas

Under the provisions of the IROD, a Performance Verification Sampling Program (PSVP) is being conducted to support the Remedial Action for OU-3. The groundwater remedy for OU-3 includes interceptor wells in the vicinity of the two groundwater impact areas identified near wells OW-21A and OW-10 (see Figure 4). An additional component of the groundwater remedy for the Site includes monitored natural attenuation (MNA) for addressing parathion and PNP. Previous data indicate that this is only applicable in the OW-21A area, as parathion and PNP concentrations were less than CERCLA Remediation Goals in other portions of the Site.

2.3 Shallow Stratigraphy and Groundwater Occurrence

2.3.1 Shallow Stratigraphy

Previous investigations conducted at the facility have described the shallow stratigraphy beneath the site (particularly Solutia Inc. and Pharmacia Corporation, 2008). Cross-sections prepared for the RCRA Permit Renewal Application (Solutia, 2018) are provided on Figures 5 and 6, which were initially presented as Figures C-4 and C-5, respectively, in the 2008 RCRA Part B Post-Closure Permit Application (Solutia, 2008). General descriptions of the shallow stratigraphic units beneath the facility are provided below.

- **Residuum:** Beneath most of the OU-3 area, the near-surface geology consists of low-permeability residuum composed of silts and clays. In general, boring logs indicate the residuum becomes denser with depth, as expected in a typical weathering profile. For this reason, the residuum has been loosely divided into two units, the shallow and deep, as further described below. The residuum extends to a depth of more than 100 feet below ground surface (bgs) and acts as a semi-confining unit to the underlying Shady Dolomite.
 - *Shallow Residuum:* The material from the surface to a depth of about 45 feet bgs is referred to as the shallow residuum. The unit consists of sandy and silty clays, with fine-to-coarse-grained sand lenses and extends laterally across most of the facility. Where water-bearing, the shallow residuum represents the uppermost aquifer beneath the site.
 - *Deep Residuum:* The material from about 45 feet bgs to the top of weathered bedrock is referred to as the deep residuum.
- **Bedrock:** The deep residuum is underlain beneath most of the facility by dolostone or dolomitic limestone bedrock of the Shady Dolomite Formation, which is encountered at an average approximate depth of 100 feet bgs. At the northernmost area of OU-3, several borings have encountered the highly weathered shale of the Rome Formation underlying the residuum at an approximate depth of 50 feet bgs. To the south, one boring penetrated both the residuum and dolostone, encountering quartzite bedrock of the Weisner Formation (Figure 5).

2.3.2 Hydrology

Historical groundwater measurements indicate that groundwater generally flows to the north in the shallow residuum, the deep residuum, and the shallow bedrock units (Solutia, 2018). This general flow direction reflects the surface topography, especially within the shallow residuum which is generally encountered under unconfined conditions. This includes the northern face of Coldwater Mountain to the south of the site, which trends from an average slope of approximately 12% to a flatter gradient of approximately 2% across the production area of the facility.

Locally, the shallow groundwater gradient is influenced by anthropogenic features such as backfilled excavations, caps, etc., which produce variable hydraulic conductivities and groundwater recharge rates. Also, the groundwater extraction systems influence the groundwater flow patterns in localized areas of the Site. Additional detail on current groundwater flow patterns is provided in Section 5.1.

Monthly rainfall totals at the site are presented in Table 7 for the last five years. The annual rainfall for 2021 was 67.94 inches, measured on-site, which is 31% greater than the average annual rainfall for the Anniston, Alabama area of approximately 52 inches.

2.3.3 Selection of Monitoring Parameters

Previous groundwater sampling and testing programs conducted at the Solutia Anniston facility have identified potential COCs to be analyzed during groundwater monitoring programs. For corrective actions currently being implemented in accordance with the requirements of the RCRA Permit, remediation standards have been defined as the RCRA Concentration Limits. For remedial action being conducted in accordance with the IROD, remediation standards have been defined as CERCLA Remediation Goals. Remediation standards are provided on Table 5 along with the 2021 groundwater monitoring results.

3.0 GROUNDWATER SAMPLING PROCEDURES

3.1 Basis for Groundwater Monitoring

Groundwater sampling and analysis were conducted semi-annually in accordance with the Quality Assurance Project Plan (Solutia, 2018) from the RCRA Permit Renewal Application, along with the OU-3 Performance Standards Verification Program Sampling and Analysis/Quality Assurance Project Plan (PSVP SA QAPP; Solutia, 2015a).

3.2 Sampling Procedures

Groundwater samples and field measurements were collected from the specified wells during April and October 2021 (see Table 2). Well construction specifications are provided in Appendix A.

3.2.1 Groundwater Elevation Measurements

Prior to groundwater sampling, groundwater levels were measured in wells from which samples were to be collected and from other monitoring wells and piezometers located throughout OU-3. Measurements were completed on 12 and 13 April and 11 October 2021, using electronic water level indicators having an accuracy of 0.01 feet. Groundwater elevations were tabulated (see Table 4) and used to construct potentiometric surface contour maps for the Shallow Residuum, Deep Residuum, and Shallow Bedrock strata as discussed in Section 4.1.

Note that between June and September 2021, 63 wells and piezometers across the site were overdrilled, plugged, and abandoned as authorized by the RCRA Permit and described in the *Monitoring Well Abandonment Report* (Solutia, 2021). Figure 2a indicates the monitoring well network as it existed in April 2021 and Figure 2b indicates the reduced monitoring well network as it existed in October 2021.

3.2.2 Groundwater Sample Collection

3.2.2.1 Well Purging and Sampling

Monitoring wells were purged, and samples collected, using low-flow procedures as specified in the applicable sampling and analysis plans (Solutia, 2015a; 2018). Wells sampled as part of the RCRA Groundwater Detection Monitoring and RCRA Groundwater Corrective Action Monitoring programs are equipped with dedicated bladder pumps used for both purging and sampling. In wells sampled as part of the CERCLA Remedial Action, portable bladder pumps are used for both purging and sampling. The portable bladder pumps are decontaminated, and new, unused bladders are installed before use at each well.

Wells were purged at a rate of 0.1 to 0.5 L/min to produce minimal drawdown, and field indicator parameters were recorded until measurements stabilized to within specified ranges. Purge water was treated using granular activated carbon and discharged into the facility decontamination pit, which discharges to the facility equalization system and then to the Anniston publicly-owned treatment works. Temperature, pH, specific conductance,

turbidity, dissolved oxygen, and redox potential (i.e., field indicator parameters) were measured in the field during purging. Table 3 summarizes the values measured after stabilization, and immediately prior to collecting the samples.

3.2.2.2 Laboratory Analyses

Groundwater samples were collected in method specified containers and shipped under chain-of-custody control to Eurofins TestAmerica Laboratories, Inc. in Savannah, Georgia. Samples were analyzed for the COCs listed on Table 2. Trip blanks, field blanks, field duplicates, and matrix spike/matrix spike duplicate pairs were collected as described in the Data Validation Summary included as Appendix F. Complete laboratory reports are provided in Appendix H.

3.2.2.3 Sample Filtration

Sampling procedures for groundwater monitoring conducted under RCRA specify filtration of PCB and metals samples using a 0.1-micron filter (Solutia, 2018), while CERCLA procedures specify a 2-micron filter (Solutia, 2015). Because 2-micron filters are not readily available commercially and because some CERCLA wells are also part of the RCRA monitoring program, all sample filtration for the 2021 monitoring program was conducted using 0.1-micron filters. For CERCLA-related performance assessment, including comparison of sample results to CERCLA Remediation Goals and concentration trend analyses for CERCLA wells, only the results for unfiltered samples are utilized. Results for both unfiltered and filtered samples are provided in tables and figures.

4.0 EVALUATION OF GROUNDWATER MONITORING RESULTS

4.1 Groundwater Flow Rate and Direction

Potentiometric surface maps (see Figures 7a, 7b, 8, and 9) have been prepared for the Shallow Residuum, Deep Residuum, and Shallow Bedrock units using groundwater measurements collected in April 2021 for all three units, and October 2021 for the Shallow Residuum only. Groundwater elevations were generally similar between April and October 2021. This observation, while inconsistent with the last few years when groundwater elevation was higher in April than October, is likely due to a relatively drier fall 2020 and winter 2021 compared to the last few years.

Both April and October 2021 groundwater gradients are consistent with those presented in previous annual groundwater monitoring reports and indicate similar groundwater flow directions and seepage velocities. Note that an estimate of effective porosity is not available for the Shallow Bedrock unit; therefore, a groundwater seepage velocity has not been estimated for the unit.

4.1.1 Shallow Residuum

Groundwater within the Shallow Residuum flows in a general north to northeasterly direction under a hydraulic gradient of approximately 0.03 to 0.04 (see Figures 7a and 7b). Based on previous aquifer testing, the geometric mean hydraulic conductivity of the Shallow Residuum is 1.53E-02 feet per day (5.4E-06 cm/sec; Solutia, 2007). The effective porosity of the residuum is estimated at 20% (Solutia, 2007). The groundwater seepage velocity within the Shallow Residuum can be calculated using Darcy's Law (Freeze and Cherry, 1979):

$$V_s = \frac{Ki}{N_e}$$

Where: V_s = seepage velocity, K = hydraulic conductivity i = hydraulic gradient, and N_e = effective porosity. This yields a seepage velocity for the Shallow Residuum of approximately 1.0 feet per year. Note that transport of organic compounds would be slower than this velocity as a result of sorption to soil particles.

4.1.2 Deep Residuum

Groundwater within the Deep Residuum flows in a general north to northwesterly direction under a hydraulic gradient of 0.04 to 0.05, as measured from well OWR-15D to well OWR-04D (see Figure 8). Based on previous aquifer testing, the geometric mean hydraulic conductivity of the Deep Residuum is 6.4E-03 feet per day (2.3E-06 cm/sec; Solutia, 2007). Calculating the seepage velocity within the Deep Residuum in a similar manner to that described above for the Shallow Residuum yields an approximate seepage velocity of 0.5 feet per year. Note that as of September 2021, there are no longer any monitoring wells screened in the deep residuum; therefore, this analysis will not be provided in future annual reports.

4.2 Groundwater Quality

The overall results of the groundwater monitoring conducted in 2021 indicate that detected COCs and respective concentrations are generally consistent with previous results. A summary of COCs detected during the April and October 2021 groundwater monitoring events is presented in this section and on Table 5. The table indicates those wells which were sampled in accordance with the RCRA Groundwater Detection Monitoring Program, the RCRA Corrective Action Monitoring Program, and the CERCLA Remedial Action Program. Note that samples are collected and analyzed from the following three wells to satisfy the requirements of the latter two programs.

- **Well OW-08A:** Sampled for PCB Aroclors, manganese, cobalt, mercury, chlorobenzene, O,O,O-triethylphosphorothioate, 4-nitrophenol, 1,2-dichlorobenzene, 1,4-dichlorobenzene, parathion, and tetraethylthiopyrophosphate per the RCRA Corrective Action Monitoring Program and indeno(1,2,3-cd)pyrene per the CERCLA Remedial Action Program.
- **Well OW-16A:** Sampled for PCB Aroclors, manganese, cobalt, mercury, chlorobenzene, O,O,O-triethylphosphorothioate, 4-nitrophenol, 1,2-dichlorobenzene, 1,4-dichlorobenzene, parathion, and tetraethylthiopyrophosphate per the RCRA Corrective Action Monitoring Program and 1,2,4-trichlorobenzene per the CERCLA Remedial Action Program.
- **Well OW-21A:** Sampled for PCB Aroclors, manganese, cobalt, mercury, chlorobenzene, O,O,O-triethylphosphorothioate, 4-nitrophenol, 1,2-dichlorobenzene, 1,4-dichlorobenzene, parathion, and tetraethylthiopyrophosphate per the RCRA Corrective Action Monitoring Program. Based on concentrations of these COCs in OW-21A, the area in the vicinity of well OW-21A was designated as a Corrective Action area addressed by the CERCLA Remedial Action Program.

Groundwater monitoring data have been compared to applicable RCRA Concentration Limits or the CERCLA Remediation Goals, and concentrations exceeding applicable limits are highlighted on Table 5.

4.2.1 WMA I Groundwater Detection Monitoring

No COCs were detected in the background well (MW-01B) or any point of compliance well (i.e., MW-11A, MW-12A, and MW-13A) above the RCRA Concentration Limits, indicating that no release has occurred from the unit (see Figure 10).

4.2.2 WMA II and SWMU 1 Groundwater Corrective Action Monitoring

Of the 13 wells monitored at WMA II and SWMU 1, including the background well (MW-01B), nine wells evidenced no detections greater than the RCRA Concentration Limits for any analyte. Concentrations in groundwater samples were less than RCRA Concentration Limits for all volatile organic compounds and metals analyzed (see Figures 11 and 15).

The monitoring locations and COCs that exceeded their respective RCRA Concentration Limits in the WMA II and SWMU 1 wells are summarized in Exhibit 1 below.

Exhibit 1. Summary of RCRA Concentration Limit Exceedances

Well	Unit	COC Exceeding RCRA Concentration Limit
OW-08A	SWMU 1	Total PCBs (unfiltered)
OW-16A	SWMU 1	Total PCBs (unfiltered) Total PCBs (filtered)
OW-21A	WMA II	Total PCBs (unfiltered) 4-Nitrophenol O,O,O-Triethylphosphorothioate Parathion
OW-22	WMA II	Total PCBs (unfiltered)

As noted above, well OW-21A is monitored per the RCRA Corrective Action Monitoring Program, while the OW-21A area is addressed by the CERCLA Remedial Action Program. Results of OW-21A, along with results from other wells monitored in this area are discussed in detail below in section 4.2.3 in context of the CERCLA Remedial Action Program. Specific results and notable differences from previous monitoring events are discussed in more detail below.

- PCB Results in Filtered Samples:** Total PCB Aroclors were less than the applicable RCRA Concentration Limit of 0.5 micrograms per liter ($\mu\text{g/L}$) in seven of the eight filtered samples, with the exception being the filtered sample at OW-16A (see Figure 13). PCB detections in filtered samples have been observed periodically at well OW-16A. Overall, the sampling results demonstrate that PCB detections in groundwater are primarily associated with entrained sediments that are typically removed through filtration.
- CERCLA Results for Well OW-16A:** As noted above, samples collected from OW-16A are analyzed for 1,2,4-trichlorobenzene, which has been assigned a Remediation Goal under CERCLA but not a Concentration Limit under RCRA. The concentration of 1,2,4-trichlorobenzene at well OW-16A exceeded the CERCLA Remediation Goal as discussed below in section 4.2.3.3. Mann-Kendall statistical analysis indicates a “stable” trend for this COC at this well over the entire monitoring record.
- Notable Differences from Prior Monitoring Events:** At monitoring well MW-20A, pentachlorophenol (PCP) was not detected. Reported PCP concentrations have ranged from approximately 4 to 14 $\mu\text{g/L}$ over the last 16 years, with two other instances of non-detect results in 2006 and 2019 (see Figure 12 and Appendix G, Figure G.2). Mann-Kendall statistical analysis indicates a “decreasing” trend for PCP at this well over the entire monitoring record.

At well OW-15, PCBs were not detected for the first time since October 2008. Between October 2008 and May 2020, PCB detections at OW-15 ranged from approximately 1 to 6 µg/L.

4.2.3 CERCLA Performance Verification Sampling

Results from the May 2020 groundwater sampling as conducted in accordance with the PSVP SA QAPP (Solutia, 2015a) are summarized below and on Figures 16 through 19. The monitoring locations and COCs that exceeded their respective CERCLA Remediation Goals at OU-3 are summarized in Exhibit 2 below.

Exhibit 2. Summary of CERCLA Remediation Goal Exceedances

Well	Area	COC Exceeding CERCLA Remediation Goal
OW-21A	OW-21A	Total PCBs 4-Nitrophenol O,O,O-Triethylphosphorothioate Parathion
T-04	OW-21A	Total PCBs
T-09	OW-21A	Total PCBs
OW-10	OW-10	Beryllium ¹ Manganese Mercury
T-20	OW-10	Manganese
OWR-11	Other Areas Within OU-3	Total PCBs Cobalt Manganese
OWR-13	Other Areas Within OU-3	Total PCBs
OW-14D	Other Areas Within OU-3	Total PCBs
OW-15D	Other Areas Within OU-3	Total PCBs
OW-16A	Other Areas Within OU-3	1,2,4-Trichlorobenzene
T-06	Other Areas Within OU-3	Total PCBs
T-18	Other Areas Within OU-3	Total PCBs

Note:

1. Beryllium at OW-10 was detected only in the duplicate filtered sample.

Specific results and notable differences from previous monitoring events are discussed in more detail in the following sections.

4.2.3.1 Well OW-21A Corrective Action Area

- **Volatile Organic Compounds and Metals:** All concentrations of VOCs and metals were less than the CERCLA Remediation Goals for all wells in the well OW-21A Corrective Action Area (see Figures 16 and 19).

- **Pesticides and Semi-Volatile Organic Compounds:** At well OW-21A, concentrations of one pesticide (parathion) and one SVOC (4-nitrophenol) exceeded CERCLA Remediation Goals (see Figure 17). The concentration of parathion at well OW-21A is consistent with historical data (see Appendix E) and based on the Mann-Kendall statistical trend analysis is “probably decreasing” over time (see Figure G.6 in Appendix G). The concentration of 4-nitrophenol at well OW-21A decreased relative to the concentration detected in 2020 (see Appendix E), but remains stable since 2004 (i.e., excluding the initial anomalous non-detect result in 2003) based on the Mann-Kendall statistical trend analysis (see Figure G.1 in Appendix G).
- **PCB Aroclors:** PCB Aroclors were detected in groundwater samples collected from three of the four wells sampled in the well OW-21A Corrective Action Area (OW-21A, T-04, and T-09; see Figure 18). At well T-04, located hydraulically upgradient of OW-21A, total PCBs were reported at a concentration of 58.75 µg/L. At well T-09, located hydraulically downgradient of OW-21A, total PCBs were reported at a concentration of 2.6 µg/L (average of duplicate samples). Based on the Mann-Kendall statistical trend analysis, no trends in the PCB concentrations at well T-04 or at well T-09 have yet been established.

At well OW-21A, PCBs were reported at a total concentration of 73.8 µg/L, after a detection of 35 µg/L in 2020 and non-detect result in 2019. The 2021 concentration is consistent with more recent historical results that have varied within an approximate order of magnitude range between 30 µg/L and 300 µg/L. Mann-Kendall trend analysis continues to indicate a “decreasing” concentration trend for PCBs at OW-21A (see Figure G.4 of Appendix G).

4.2.3.2 Well OW-10 Corrective Action Area

- **Volatile Organic Compounds:** All concentrations of VOCs were less than the CERCLA Remediation Goals for all wells in the well OW-10 Corrective Action Area (see Figure 16).
- **PCB Aroclors:** At well OW-10, PCB Aroclors were not detected, representing the second consecutive occurrence of a non-detect result since the CERCLA monitoring program began in April 2017 (see Figure 18). At well T-20 located downgradient of OW-10, PCB Aroclors were not detected after a single PCB Aroclor (1248) was reported at a concentration of 1.1 µg/L in 2020.
- **Metals:** At well OW-10, beryllium, manganese and mercury concentrations exceeded the respective CERCLA Remediation Goals (see Figure 19). In the downgradient well T-20, manganese concentrations also exceeded the CERCLA Remediation Goal. Concentrations of beryllium, manganese, and mercury in the OW-10 area are consistent with previous data. After no detections of beryllium in 2020, the reported beryllium concentration of 4.5 J µg/L (only in the duplicate filtered sample) in 2021 is consistent with reported concentrations from 2017-2019.

4.2.3.3 Other Areas Within OU-3

Nine wells are sampled across OU-3 under the CERCLA Remedial Action Program for PCB Aroclors, PCB Homologs, and metals. As discussed in section 4.2, the RCRA Corrective Action Monitoring wells OW-16A and OW-08A are also sampled for one VOC and one SVOC, respectively, under the CERCLA Remedial Action Program. Results for sampling of these eleven wells within OU-3 are summarized below:

- **Volatile Organic Compounds:** A concentration of 350 µg/L was reported for 1,2,4-trichlorobenzene at well OW-16A, which exceeded the CERCLA Remediation Goal of 70 µg/L (see Figure 16).
- **Semi-Volatile Organic Compounds:** Indeno(1,2,3-cd)pyrene, the only compound analyzed at well OW-08A under the CERCLA Remedial Action program, was not detected (see Figure 17).
- **PCB Aroclors:** The concentrations of total PCB Aroclors were less than the reporting limit at four wells (i.e., WEL-01, WEL-04, OWR-03S, OWR-14D). Reported concentrations of total PCB Aroclors in unfiltered samples exceeded the CERCLA Remediation Goal of 0.5 µg/L at the other five wells (i.e., OWR-11, OWR-13, OWR-15D, T-6, and T-18; see Figure 18).
- **PCB Homologs:** Reported concentrations of total PCB Homologs in unfiltered samples were less than the reporting limit at one well, OWR-14D. Reported concentrations of total PCB Homologs in unfiltered samples exceeded the CERCLA Remediation Goal of 0.5 µg/L at the other two wells (OWR-13 and T-18; see Figure 18 and Table 5).
- **Metals:** Concentrations of cobalt and manganese were less than CERCLA Remediation Goals in all but one well, OWR-11 (see Figure 19).

5.0 EVALUATION OF CORRECTIVE ACTION SYSTEMS

5.1 Capture of Affected Groundwater

- **RCRA Groundwater Corrective Action:** Operation of IWs has successfully controlled migration of affected groundwater as demonstrated by cones of depression maintained by the interceptor wells at WMA II and SWMU 1 (see Figures 7a and 7b).
- **CERCLA RA:** In the Corrective Action Areas near wells OW-21A and OW-10, large drawdowns are maintained in the associated interceptor wells indicating recovery of impacted groundwater (see Figures 7a and 7b).

5.2 Corrective Action Systems Operation

A summary of the operation of the corrective action systems during calendar year 2021 is provided below:

- **WMA II, New Limestone Bed:** Groundwater was recovered from a total of 11 interceptor wells located immediately downgradient of WMA II (i.e., wells IW-16 through IW-25 and DW-01; see Figures 2a and 2b). Volumes of recovered groundwater are measured for the entire well network and totaled more than 0.66 million gallons during 2021 (see Table 6). Water is collected in a tank for subsequent on-site management.
- **SWMU 1, South Landfill:** More than 0.64 million gallons was recovered in 2021 from the 11 interceptor wells located along the western and northern sides of SWMU 1 (i.e., wells IW-02, IW-05 through IW-08, and IW-10 through IW-14A; see Table 6 and Figures 2a and 2b). Recovered groundwater is treated by filtration and granular activated carbon (GAC) in Carbon Treatment System (CTS) #3 (with the exception of well IW-14A, which discharges to CTS #2 for treatment). The treated groundwater from CTS #3 is discharged to the Anniston Water Works and Sewer Board (AWWSB) sewer system in accordance with State Indirect Discharge (SID) Permit Number IU350800048 (effective October 1, 2018). The volume of groundwater recovered by the system in 2021 is within the range of the previous five-year period when between 0.2 and 0.9 million gallons were recovered each year.

CTS #3 also treats water collected by the Cell 3E seep collection and conveyance system. In 2021, seep water treated at CTS #3 totaled approximately 0.27 million gallons (this volume is in addition to the volume of groundwater recovered by the SWMU 1 IWs).

- **Well OW-21A Corrective Action Area:** A total of more than .49 million gallons of groundwater was recovered from wells IW-26 and IW-27 located downgradient of well OW-21A (see Table 6 and Figures 2a and 2b). Water is treated by filtration and GAC in CTS #1, and the treated groundwater is discharged to the AWWSB sewer system per the SID permit (effective October 1, 2018).

- **Well OW-10 Corrective Action Area:** Approximately 122,700 gallons of groundwater were recovered from wells IW-28 and IW-29 located downgradient of well OW-10 (see Table 6 and Figures 2a and 2b). Water is treated by filtration and GAC in CTS #2, and the treated groundwater is discharged to the AWWSB sewer system per the SID permit (effective October 1, 2018).

5.3 Groundwater Monitoring Concentration Trend Analyses

To evaluate the effectiveness of the Corrective Action and Remedial Action systems for reducing COC concentrations in groundwater, trends of COC concentrations versus time have been analyzed. The Mann-Kendall statistical analysis was employed for this purpose.

5.3.1 Description of the Mann-Kendall Test

The Mann-Kendall test is a non-parametric statistical procedure that is well suited for analyzing trends in data over time (Gilbert, 1987; Aziz et al., 2003; Connor, 2014). The Mann-Kendall test can be viewed as a non-parametric test for zero slope of the first-order regression of time-ordered concentration data versus time. The Mann-Kendall test does not require any assumptions as to the statistical distribution of the data (e.g. normal, lognormal, etc.) and can be used with data sets which include irregular sampling intervals and missing data. The Mann-Kendall test is designed for analyzing a single groundwater constituent; multiple constituents are analyzed separately.

5.3.2 Interpretation of Mann-Kendall Test Results

The Coefficient of Variation (COV) is a statistical measure of how the individual data points vary about the mean value. Values less than or near 1.00 indicate that the data form a relatively close group about the mean value. Values larger than 1.00 indicate that the data show a greater degree of scatter about the mean.

The Mann-Kendall statistic (S) measures the trend in the data. Positive values indicate an increase in constituent concentrations over time, whereas negative values indicate a decrease in constituent concentrations over time. The strength of the trend is proportional to the magnitude of the Mann-Kendall Statistic (i.e., large magnitudes indicate a strong trend). The “Confidence in Trend” is the statistical confidence that the constituent concentration is increasing (S>0) or decreasing (S<0). The “Concentration Trend” for each well is determined according to the decision matrix shown in Exhibit 3 below.

Exhibit 3. Mann-Kendall Analysis Decision Matrix

Mann-Kendall Statistic	Confidence in Trend	Concentration Trend
$S > 0$	> 95%	Increasing
$S > 0$	90 - 95%	Probably Increasing
$S > 0$	< 90%	No Trend
$S \leq 0$	< 90% and $COV \geq 1$	No Trend
$S \leq 0$	< 90% and $COV < 1$	Stable
$S < 0$	90 - 95%	Probably Decreasing
$S < 0$	95%	Decreasing

5.3.3 Mann-Kendall Analysis of OU-3 Groundwater Monitoring Data

The majority of the COCs monitored at OU-3 are either not detected above laboratory detection limits or are present at concentrations below applicable remedial limits; therefore, for most COCs, corrective action or remediation goals have already been achieved. For those COCs and monitoring locations where concentrations exceed remedial criteria, the Mann-Kendall trend analysis has been applied to evaluate overall plume stability and corrective action effectiveness for groundwater. The Mann-Kendall trend analysis has been applied to all COCs with concentrations that exceeded remedial criteria between 2017-2021 as summarized in Exhibit 4 below.

As summarized in Exhibit 4, a total of ten COCs at 17 monitoring locations have had concentrations exceeding remedial criteria between 2017 and 2021, resulting in trend calculation for 26 COC/well combinations. Where a trend has been established using the Mann-Kendall statistical analysis, 18 of the 26 trend results were Stable, Probably Decreasing, or Decreasing, while only 2 of the 26 trend results were Increasing. For the remaining 6 of the 26 trend results, no trend has been established due to low statistical confidence in the trend and/or high variability in the monitoring data. Four of the 6 “no trend” results are associated with CERCLA monitoring wells, which have only had five monitoring events (a minimum of four monitoring events is required to calculate a trend). Five additional trend results were unable to be calculated due to a preponderance of non-detect results.

Exhibit 4. Results of Mann-Kendall Statistical Analysis

Unit or Corrective Action Area/Well	Constituent of Concern	Mann-Kendall Statistic (S)	Confidence Factor	Concentration Trend
WMA II				
MW-20A	Pentachlorophenol	-336	>99.9%	Decreasing
OW-22	Total PCBs	64	95.2%	Increasing
	Total PCBs (Filtered)	--	--	Not Detected
SWMU 1				
OW-08A	Total PCBs	-82	88.4%	No Trend
	Total PCBs (Filtered)	--	--	Not Detected
OW-15	Total PCBs	141	98.1%	Increasing
	Total PCBs (Filtered)	--	--	Not Detected
OW-16A	Total PCBs	2	50.6%	No Trend
	Total PCBs (Filtered)	--	--	Not Detected
	1,2,4-TCB	-3	67.5%	Stable
OW-21A Area				
OW-21A	4-Nitrophenol	4	54.1%	No Trend
	O,O,O-TEPP	-28	82.5%	Stable
	Total PCBs	-67	99.0%	Decreasing
	Parathion	-41	90.2%	Prob. Dec.
T-04	Total PCBs	4	75.8%	No Trend
T-09	Total PCBs	6	88.3%	No Trend
OW-10 Area				
OW-10	Total PCBs	-7	92.1%	Prob. Dec.
	Manganese	-4	75.8%	Stable
	Mercury	0	40.8%	Stable
	Beryllium	-2	59.2%	Stable
T-20	Total PCBs	--	--	Not Detected
	Manganese	-8	95.8%	Decreasing
Other Areas Within OU-3				
OWR-11	Total PCBs	-2	59.2%	Stable
	Cobalt	-7	92.1%	Prob. Dec.
	Manganese	-5	82.1%	Stable
OWR-13	Total PCBs	4	75.8%	No Trend
OWR-14D	Total PCBs	-4	75.8%	Stable
OWR-15D	Total PCBs	-2	59.2%	Stable
T-06	Total PCBs	0	40.8%	Stable
T-18	Total PCBs	-4	75.8%	Stable
WEL-01	Total PCBs	-1	50.0%	Stable

Notes:

1. See Appendix G for complete Mann-Kendall results.
2. Prob. Dec. = Probably Decreasing
3. O,O,O-TEPP = O,O,O-Triethylphosphorothioate
4. 1,2,4-TCB = 1,2,4-Trichlorobenzene; only analyzed in OW-16A per CERCLA
5. Not Detected = More than 75% of the sample results for this constituent in this well are non-detect, so a trend was not calculated to avoid calculating a trend on detection limits.

5.4 Conclusions

At WMA II and SWMU 1, concentrations of all COCs exceeding the respective RCRA Remedial Goals evidence a decreasing, stable, or no trend, with exception of OW-15 and OW-22, both of which are discussed further below. Overall, the calculated trends are generally consistent with the trends previously presented. At OW-15, associated with SWMU 1, and at OW-22, associated with WMA II, an increasing trend is calculated for total PCBs (unfiltered). At both locations, these results appear to be a function of high variability and numerous non-detects in the early monitoring period between 1998 and 2008. Since 2009, PCB concentrations measured in OW-15 have been consistently between approximately 1 and 6 µg/L, and at OW-22 consistently between approximately 0.5 and 1.6 µg/L, with both wells having occasional non-detect PCB results (see Figure G.3 in Appendix G). The filtered samples in both wells have been all non-detect, further demonstrating the effectiveness of the groundwater remediation efforts for SWMU 1.

Trends for monitoring wells in the CERCLA Corrective Action Areas also evidence decreasing, probably decreasing, stable, or no trend. At OWR-13, the trend changed from “Increasing” to “No Trend” following lower reported PCB concentrations in 2021 relative to those reported in 2020. At OW-10, PCBs were not detected for the second consecutive annual monitoring event, demonstrating effectiveness of groundwater recovery efforts in this area. In summary, the trend data indicate that the Corrective Action Systems and the Remedial Action are both progressing toward applicable cleanup limits by achieving predominantly declining or stable concentrations of COCs in groundwater.

Notes:

- Well locations are shown on Figure 2.
- April 2021 depths to water and total depths measured on 12-20 April 2021.
- October 2021 depths to water and total depths measured on 11-13 October 2021.
- ft bgs = Feet below ground surface
 ft btoc = Feet below top of casing
 ft msl = Feet above mean sea level
 NM= Not Measured
 P&A=Plugged and Abandoned prior to Oct. 2021, so depth to water or total depth was not measured.
- Water elevations for interceptor wells IW-26, IW-27, IW-28, and IW-29 are shown as the elevation of the “pump on” level control sensor for each well. Downhole equipment and wiring interferes with direct measurement and water elevations are maintained at or below this elevation during normal system operation.

- 1,2,4-Trichlorobenzene in well OW-16A is required for CERCLA. Concentrations of 1,2,4-Trichlorobenzene compared to CERCLA Remediation Goals.
- J = Estimated concentration;

H = Sample was prepped or analyzed beyond the specified holding time;

-- = not applicable;

- = not analyzed.

Dup = Duplicate sample

N = Original sample

PCBs = Polychlorinated biphenyls

SVOCs = Semi-volatile organic compound

VOCs = Volatile organic compound

CERCLA = Comprehensive Environmental Response, Compensation, and Liability Act

RCRA = Resource Conservation and Recovery Act

TABLE 6
VOLUMES OF GROUNDWATER RECOVERED DURING 2021

Solutia Inc., Anniston, Alabama
 RCRA Post-Closure Permit No. ALD 004 019 048
 Consent Decree Docket No. 1:02-ec-0749-KOB

Month	WMA II Corrective Action System (note 1; gallons)	Well OW-21A Corrective Action Area (note 2; gallons)	Well OW-10 Corrective Action Area (note 3; gallons)	SWMU 1 Wells (note 4; gallons)
January	52,828	44,374	1,500	44,589
February	56,472	122,258	16,300	90,393
March	52,100	106,478	9,800	92,416
April	55,314	17,615	7,300	55,241
May	64,386	19,458	9,000	65,353
June	70,700	16,025	11,000	67,074
July	78,100	19,874	18,239	92,023
August	47,200	5,408	12,389	37,524
September	45,780	20,533	13,414	31,334
October	48,520	39,200	7,600	18,218
November	41,767	33,797	6,094	13,879
December	48,333	48,993	10,117	37,437
Total (2021)	661,500	494,013	122,753	645,481

Notes:

1. WMA II (New Limestone Bed) recovered groundwater volume represents flow from wells IW-16 through IW-25 and DW-01.
2. Well OW-21A Corrective Action Area recovered groundwater volume represents flow from wells IW-26 and IW-27.
3. Well OW-10 Corrective Action Area recovered groundwater volume represents flow from wells IW-14A, IW-28, and IW-29. The flow meter in CTS #2 was not working properly between in early 2021 and was replaced in June 2021. The recovered volumes for January - June at the OW-10 Corrective Action Area, rounded to the nearest 100 gallons, are based on well run-time meter readings and a pumping rate of 4 gpm.
4. SWMU 1 recovered groundwater volume represents flow from wells IW-02, IW-05 through IW-08, and IW-10 through IW-13.
5. CTS = Carbon Treatment System
 SWMU = Solid Waste Management Unit
 WMA = Waste Management Area

REGULATORY LIMITS (VOCs)		
Compound	RCRA Concentration Limit (ug/L)	CERCLA Remediation Goal (ug/L)
Total PCBs	0.5	0.5
Parathion	75	85
4-Nitrophenol (4-NP)	128	125
O,O,O-Triethylphosphorothioate (O,O,O)	102	310

LEGEND

- Monitoring well
- No analytes detected
- One or more analytes detected below regulatory limits
- One or more analytes detected above regulatory limits
- Operable Unit 3 (OU-3) boundary
- Unit/Area addressed by RCRA Permit/CERCLA Remedial Action (approximate boundary)

Notes

1. Analytes: PCBs, parathion, 4-nitrophenol, and O,O,O-triethylphosphorothioate, samples from MW-01B also analyzed for cobalt, mercury, sulfotepp, 1,2-dichlorobenzene, 1,4-dichlorobenzene, and chlorobenzene.
2. Approximate locations of site features shown.

Notes:

1. Well locations are shown on Figure 2.
2. ft = Feet
 ft bgs = Feet Below Ground Surface
 ft btoc = Feet Below Top of Casing
 ft msl = Feet Above Mean Sea Level
3. Northing and Easting reported for State Plane Alabama East (FIPS 0101 Feet)
4. Stick-up estimated based on ground surface elevation.
5. Ground surface around well may have been modified after well installed. Ground surface elevation reflects most recent measured elevation.
6. Stick-up measurement based on well construction logs or difference between top of casing and ground elevation where indicated.
7. Stick-up measurement taken on October 2007, except for T-7 to T-12 (October 2008) and T-13 to T-15 (August 2010).
8. Well plugged and abandoned between June and September 2021.

**2021 ANNUAL GROUNDWATER DETECTION MONITORING AND
CORRECTIVE ACTION EFFECTIVENESS REPORT**

Solutia, Inc., Anniston, Alabama
RCRA Post-Closure Permit ALD 004 019 048
Consent Decree Docket No. 1:02-ec-0749-KOB

APPENDIX B: PURGING LOGS

APRIL 2021 PURGING LOGS

This page has been intentionally left blank.

LOW FLOW MONITORING WELL PURGING LOG

GSI Job No.: 5739 Date: 4-13-21 Personnel: STP
 Project: Spring Gw Sampling - Monday Client: Solutia Page: 1 of 1
 Well ID: MW-13A Starting Water Level: 93.99 Time: 1607
 Total Depth: 114.95 Ending Water Level: 94.60 Time: 1643
 Purging Time: On: 1615 Evacuation Method: Dedicated bladder pump
 Off: 1643 Volume in Well (gallons): 4.82
 Well Depth: 123.5 Evacuation Rate (gal/min): 0.065
 Screen Depth: 107.7-112.7 Total Volume Removed (gallons): 4.5

PURGING DATA AND FIELD PARAMETERS

Time	Depth to Water (ft TOC)	Pumping Rate (mL/min)	Temperature (°F/°C)	pH	Turbidity (NTU)	Spec. Cond. (umho/cm)	DO (mg/L)	ORP (mV)	Description (Color/Odor)
1620	94.37	NM	12.6	7.40	NM	328.6	11.83	162.4	clear / no odor
1624	94.49	225	12.0	7.31	0.69	330.0	12.05	167.8	" / "
1627	94.52	225	11.9	7.33	0.91	332.6	9.78	169.5	" / "
1630	94.52	225	11.8	7.33	1.40	344.3	8.03	170.7	" / "
1633	94.47	200	11.8	7.32	1.17	347.9	7.73	171.2	" / "
1636	94.47	200	11.8	7.32	0.90	351.0	7.20	171.5	" / "
1639	94.56	200	11.8	7.34	0.71	351.6	6.94	171.8	" / "
1643	94.60	200	11.8	7.35	0.54	349.6	6.67	171.6	" / "

Stabilization Requirements as per SOP A-10 and EPA SOP for Low-Flow/Minimal Drawdown Groundwater Sample Collection.
 Three successive readings every 3 to 5 minutes to include:

Temperature:	+/- 3 °C
pH:	+/- 0.1 Standard Units
Specific Conductivity:	+/- 3%
ORP:	+/- 10 mV
Dissolved Oxygen:	< 0.5 mg/L +/- 10% if DO is greater than 0.5 mg/L
Turbidity:	< 10 NTU or +/- 10% if turbidity is greater than 10 NTUs

Notes:

Sampled MW-13A @ 1643

$$V = \pi (D/2)^2 \times h \times 7.48 \text{ gal/ft}^3$$

$$0.006774 \text{ ft}^2$$

Rw 2" well

$$V = \pi (D/2)^2 \times 7.48 \text{ gal/ft}^3 \times h$$

$$0.163188 \times h$$

552.5 ml purged
 378.5 ml gal
 1.46

$$h = 23.5 - 93.99 = 29.5$$

$$V = 0.163188 \times 29.5 = 4.82$$

LOW FLOW MONITORING WELL PURGING LOG

GSI Job No.: 5739/5740 Date: 4-14-21 Personnel: STP
 Project: Ammonia BW Sampling Client: Solution Page: 1 of 1
 Well ID: MW-01B Starting Water Level: 30.78 Time: 9:15
 Total Depth: 63.72 Ending Water Level: 35.81 Time: 9:55
 Purging Time: On: 9:21 Off: 9:55 Evacuation Method: Pediatric bladder pump
 Well Depth: 64' Volume in Well (gallons): 5.42 gal
 Screen Depth: 59'-64' Evacuation Rate (gal/min): 2.033 gal/min (exact) (0.029 gal/min approximate)
 Total Volume Removed (gallons): ~1 gal (1.12 gal exact)

PURGING DATA AND FIELD PARAMETERS

Time	Depth to Water (ft TOC)	Pumping Rate (mL/min)	Temperature (°F / °C)	pH	Turbidity (NTU)	Spec. Cond. (umhos/cm)	DO (mg/L)	ORP (mV)	Description (Color/Odor)

Stabilization requirements, per SOP A-10, are achieved when water is free of visible sediment and three successive readings every 3 to 5 minutes to include:

Temperature:	+/- 3 °C
pH:	+/- 0.1 Standard Units
Specific Conductance:	+/- 3%
ORP:	+/- 10 mV
Dissolved Oxygen:	< 0.5 mg/L or +/- 10% if DO is greater than 0.5 mg/L
Turbidity:	< 10 NTU or +/- 10% if turbidity is greater than 10 NTUs

Notes:

Notes:

$(112 - 95.01) \cdot 0.103 = 2.77$

—	250 mL plastic with HNO3 for metals analysis (filtered)	

REMARKS

Condition of well: @ air tubing is not connected to the brass connector on well cap - the white plastic piece is broken off which does not allow air into the pump. JA/EGK attempt to replace with a set from partnership but unsuccessful (brass piece is rusted onto well cap) sampled by duct taping air hose and air tubing to each other and creating a seal forcing air into tubing

PARAMETER LIST

VOCs (8280)
 Chlorobenzene: YES / NO
 1,2,4-Trichlorobenzene: YES / NO
 Trichloroethene: YES / NO

SAMPLING DATA / FIELD PARAMETERS

Temperature: 16.8 Color: clear
 (°F / °C) 6.94 pH: 6.94 Appearance: clear
 (Standard Units) Turbidity: 0.57 DO: 4.46
 (NTU) Conductivity: 367.5 (mg/L)
 (µmhos/cm) ORP: 149.0 (mV)
 Sampling Method/ Material: dedicated teflon lined bladder pump

CONTAINER & ANALYSES DESCRIPTION

COLLECTED	CONTAINER & ANALYSES	NOTES
—	40 mL glass vial with HCl for VOA analysis (8280)	
<u>2</u>	1 L glass vial with no preservative for SVOC analysis (8270)	
<u>2</u>	1 L glass vial with no preservative for Organophos. Pest. analysis (8141)	
<u>2</u>	1 L glass vial with no preservative for PCB analysis	
—	1 L glass vial with no preservative for PCB analysis (filtered)	
—	250 mL plastic with HNO3 for metals analysis (see COC for exact metals)	
—	250 mL plastic with HNO3 for metals analysis (filtered)	

REMARKS

Condition of well: good

PARAMETER LIST

VOCs (8260)

Chlorobenzene: YES / NO
 1,2,4-Trichlorobenzene: YES / NO
 Trichloroethene: YES / NO

SVOCs (8270)

1,2-Dichlorobenzene YES / NO
 1,4-Dichlorobenzene YES / NO
 Indeno(1,2,3-cd)pyrene YES / NO
 4-Nitrophenol YES / NO
 Pentachlorophenol YES / NO
 2,4,6-Trichlorophenol YES / NO
 o,o,o-Triethylphosphorothioate YES / NO

PCBs (8082)

Arochlors YES / NO
 Homologs YES / NO

PESTICIDES (8141)

Tetraethylthiopyrophosphate / Sulfotep YES / NO
 Parathion YES / NO

METALS (8010)

Beryllium YES / NO
 Cobalt YES / NO
 Manganese YES / NO

MERCURY (7470)

Mercury YES / NO

GSI Job No. 6122

**2021 ANNUAL GROUNDWATER DETECTION MONITORING AND
CORRECTIVE ACTION EFFECTIVENESS REPORT**

Solutia, Inc., Anniston, Alabama
RCRA Post-Closure Permit ALD 004 019 048
Consent Decree Docket No. 1:02-ec-0749-KOB

APPENDIX D: CALIBRATION LOGS

APRIL 2021 CALIBRATION LOGS

This page has been intentionally left blank.

FIELD INSTRUMENT CALIBRATION LOG

GSI Job No.: <u>5739 / 5740</u>	Project Name: <u>Anniston Spring GW Sampling</u>
Date of Calibration: <u>4-13-2021</u>	Date of Last Calibration: <u>4-7-2021</u>
Date(s) Instrument Used: <u>4-13-2021</u>	Name of Person Performing Calibration: <u>JA</u>

EQUIPMENT

Equipment Type: <u>Water Quality Meter</u>	Manufacturer: <u>YSI</u>
Model/Model Number: <u>Professional Plus</u>	Serial Number: <u>C2102</u>

CALIBRATION STANDARDS

Parameter for Calibration	Calibration Standard Value (include +/-)	Units	Brand/Name	Expiration Date	Standard Vendor
DO	7.0 8.68	mg/L	—	—	—
ORP	10.0 240.36	mV	lot 1012226	n/a	AJAX
Sp. Conductance	1413	umhos	Aqua Solutions	08/30/21	AJAX
pH	10 ± 0.01	pH	↓	06/30/22	↓
pH	7 ± 0.01	pH	↓	10/30/22	↓
pH	4 ± 0.01	pH	↓	10/30/22	↓

CALIBRATION

Time	Temperature	Standard Value	Instrument Response	% Deviation	Pass/Fail (See "Notes" to determine)
1324	22.4°C	8.68 mg/L	8.68 mg/L	0%	PASS
1325	20.5°C	240.36 mV	242.3 mV	±10mV	PASS
1333	21.1°C	1413 umhos	1480 umhos	4.5%	PASS
1339	21.2°C	10 ± 0.01	10.01	± 0.2	PASS
1346	21.3°C	7 ± 0.01	7.02	± 0.2	PASS
1415	23.3°C	4 ± 0.01	3.89	± 0.2	PASS FAIL
1430	used 4, 7, 10 to calibrate pH then checked 4, 7, 10, all standards within ± 0.2 units				

Notes:

- Turbidity:** Calibration values for turbidity must be within +/- 10% of the standard for values.
- Dissolved Oxygen:** Calibration values for DO must be within +/- 0.2 mg/L of the standard for values. Use Table "Dissolved Oxygen Saturation."
- Conductivity:** Calibration values for conductivity must be within +/- 5% of the standard for values.
- pH:** Calibration values for pH must be within +/- 0.2 pH units of the standard for values.
- Oxidation Reduction Potential (ORP or Redox):** Calibration values for ORP must be within +/- 10 mV units of the standard for values.

Notes:

- Concentrations exceeding the applicable regulatory limits or goals are highlighted in yellow.
- 1,2,4-Trichlorobenzene in well OW-16A and Indeno (1,2,3-cd) pyrene in well OW-08A are required for CERCLA. Concentrations compared to CERCLA Remediation Goals.

3. Data Flags:

H = Bias in sample result likely to be high
 J = Estimated concentration
 L = Bias in sample result likely to be low

R = Rejected;
 -- = not applicable;
 - = not analyzed.

4. Abbreviations:

Dup = Duplicate sample
 N = Original sample
 PCBs = Polychlorinated biphenyls
 SIM = Selected ion monitoring

SVOCs = Semi-volatile organic compound
 VOCs = Volatile organic compound
 CERCLA = Comprehensive Environmental Response, Compensation, and Liability Act
 RCRA = Resource Conservation and Recovery Act

Notes:

- Concentrations exceeding the applicable regulatory limits or goals are highlighted in yellow.
- 1,2,4-Trichlorobenzene in well OW-16A and Indeno (1,2,3-cd) pyrene in well OW-08A are required for CERCLA. Concentrations compared to CERCLA Remediation Goals.

3. Data Flags:

H = Bias in sample result likely to be high
 J = Estimated concentration
 L = Bias in sample result likely to be low

R = Rejected;
 -- = not applicable;
 - = not analyzed.

4. Abbreviations:

Dup = Duplicate sample
 N = Original sample
 PCBs = Polychlorinated biphenyls
 SIM = Selected ion monitoring

SVOCs = Semi-volatile organic compound
 VOCs = Volatile organic compound
 CERCLA = Comprehensive Environmental Response, Compensation, and Liability Act
 RCRA = Resource Conservation and Recovery Act

Consent Decree Docket No. 1:02-ec-0749-KOB

APPENDIX F: DATA VALIDATION

APPENDIX F DATA VALIDATION

Solutia Inc., Anniston, Alabama
RCRA Post-Closure Permit No. ALD 004 019 048
Consent Decree Docket No. 1:02-ec-0749-KOB

1.0 EXECUTIVE SUMMARY

1.1 Results of Data Validation

This data validation report provides the results of an evaluation of data from nine data packages issued by TestAmerica Laboratories, Inc. (TestAmerica), located in Savannah, Georgia. The data packages report the analyses of groundwater samples collected in April and October 2021 at the Solutia Inc. facility located in Anniston, Alabama.

As further detailed in this data validation report, review of the analytical data received from the laboratory have verified that the data are suitable for the intended purpose of i) verifying that a release to groundwater from WMA I has not occurred; ii) monitoring concentrations of constituents of concern (COCs) in groundwater; and iii) evaluating the effectiveness of corrective action efforts being implemented at WMA II, SWMU 1, the well OW-21A Corrective Action Area, and the OW-10 Corrective Action Area.

1.2 Summary of Groundwater Sampling Program

The 2021 groundwater sampling program at the Solutia Anniston facility included collection and analysis of a total of 63 samples in April and 11 samples in October, including field duplicates and blanks (see Table F.1 for a listing of sample identifications cross-referenced to laboratory identifications). Samples were analyzed for one or more of the following COCs:

- Volatile Organic Compounds (VOCs) by SW-846 Method 8260B
- Semi-volatile Organic Compounds (SVOCs) by SW-846 Method 8270D
- Pentachlorophenol by SW-846 8270D SIM
- Organochlorine Pesticides and Polychlorinated Biphenyls by SW-846 Method 8081B/8082A
- Polychlorinated Biphenyls (PCB homologs) by EPA Method 680
- Organophosphorous Pesticides by SW-846 Method 8141B
- Metals (i.e., cobalt, beryllium, and/or manganese) by SW-846 Method 6010C
- Mercury by SW-846 Method 7470A

1.3 Analytical Results

Detected analytes (i.e., reported greater than the laboratory reporting limit) for the April and October 2021 sampling events are summarized in Table 5 in the main body of this Annual Groundwater Monitoring Report. Historical results for groundwater sampling for the last five years (i.e., 2017 to 2021) are provided in Appendix E. Data acquired during 2021 included in Table 5 and Appendix E have been qualified as described in this data validation report. Complete laboratory reports are provided in Appendix H.

2.0 DATA VALIDATION PROCEDURES

2.1 Basis for Data Validation

The data validation and review detailed in this appendix has been conducted in accordance with applicable project and site-specific documents for the Solutia Anniston facility, as follows:

1. "Attachment 6.2: Quality Assurance Project Plan," in *RCRA Post-Closure Permit Renewal Application ALD 004 019 048*, Revision 1 (Solutia, Inc., 2018).
2. "OU-3 Performance Standards Verification Sampling and Analysis/Quality Assurance Project Plan" (PSVP; Solutia, 2015a).

For simplicity, these documents will be referred to as the Sampling and Analysis Plan (SAP) in this appendix.

2.2 Data Quality Objectives

Analytical data have been evaluated with respect to data quality objectives (DQOs) specified in the SAP for representativeness, comparability, precision, accuracy, and completeness. Quality assurance/quality control (QA/QC) requirements for blanks, spikes, and duplicates (including matrix spikes/matrix spike duplicates; MS/MSDs), and calibrations are also provided in the SAP.

- **Representativeness** has been evaluated by verifying that groundwater samples have been collected from the locations specified in the SAP.
- **Comparability** has been evaluated by ensuring that standard sample collection, handling, and analytical procedures have been employed. The scope of this data quality analysis has involved review of the following:
 1. Completeness of laboratory data packages
 2. Chain-of-custody control and sample handling
 3. Holding times for sample preparation, extraction, and analysis
 4. Analytical methods used for sample analysis
- **Accuracy** has been evaluated by comparing the project-specific values for the recovery of spiked compounds, expressed as percent recovery, in applicable laboratory control samples, matrix spikes, surrogate spikes, and other spiked samples.
- **Precision** has been evaluated by comparing the project-specified relative percent difference (RPD) values to those calculated for duplicate samples, including laboratory control samples, matrix spike duplicates and field duplicates.

Matrix spike and duplicate results are meaningful when the matrix is obtained from the site being sampled. Therefore, only those QC issues noted for MS/MSD

pairs prepared in the laboratory from samples collected from the Solutia site are discussed in this report.

- **Completeness** has been calculated as the percentage of total number of analytes that have met applicable DQO criteria with respect to the total number of analytes specified to be collected.

3.0 RESULTS OF DATA VALIDATION

3.1 Representativeness

- **Evaluation:** Samples specified by the SAP were collected at designated monitoring well locations in April and October 2021. Sampling locations were specified in the SAP as being representative of the groundwater conditions at each location; therefore, the criterion of representativeness has been satisfied.
- **Findings:** No data have been qualified on the basis of unrepresentative samples.

3.2 Comparability

3.2.1 Laboratory Data Packages

- **Evaluation:** The nine data packages for the project are complete, providing results for the samples provided and analyzing the samples for the COCs specified on the chain-of-custody forms.
- **Findings:** No data have been qualified on the basis of insufficiencies in the laboratory data packages.

3.2.2 Chain-of-Custody Control and Sample Handling

- **Evaluation:**
 - i. **Chain-of-Custody:** Samples were evaluated for agreement with the chain-of-custody by the laboratory upon receipt. The paperwork was filled out properly, with a few minor exceptions, none of which warranted qualification of the results:
 - a. One chain-of-custody inadvertently left off sample times for some samples. The sample times are indicated on the respective data evaluation checklist.
 - b. Two chain-of-custodies inadvertently left off sample types. The sample types are indicated on the respective data evaluation checklists.
 - ii. **Sample Condition:** Samples were received by the laboratory in good condition, having been collected in appropriate containers and preserved in the field, if applicable.

- iii. Sample Temperatures: Sample receipt temperatures were within the acceptable criterion of 4°C +/- 2°C, with the exception of 10 coolers (out of 31 total) from the April event and 3 coolers (out of 10 total) from the October event that were less than 2°C. These samples were not frozen and were identified by the lab as being properly preserved. Therefore, the marginal exceedance of the temperature criterion would not result in a compromise to data quality.
- iv. Field Filtration: Samples were filtered in the field as specified in the SAP.
- v. Field Performance: Appropriate field performance was met.
- **Findings:** No samples were qualified on the basis of the chain-of-custody, sample condition, sample temperatures, field filtration, or field performance.

3.2.3 Holding Times for Sample Preparation, Extraction, and Analysis

- **Evaluation:** Samples for all chemicals of concern (COCs) were prepared and analyzed within the holding times specified in SW-846, except for the sample pretreatment for 8141B in samples OW-22, T-09, and Field Duplicate 3 collected in April 2021; sample pretreatment for 8270D LL (1,4-DCB and 4-Nitrophenol only) in sample OW-08A collected in April 2021; and sample analysis for 8260B in sample MW-15 collected in October 2021.
- **Findings:** Non-detect results for 8141B for samples OW-22, T-09, and Field Duplicate 3 collected in April 2021; for 8270D LL (1,4-DCB and 4-Nitrophenol only) for sample OW-08A collected in April 2021; and for 8260B for sample MW-15 collected in October 2021 are qualified (UJ) due to exceedances of holding time.

3.2.4 Analytical Methods Used for Sample Analysis

- **Evaluation:** Methods specified in the Sampling and Analysis Plan as listed on the chain-of-custody forms were employed to analyze the samples collected in April and October 2021. However, the requested reporting limits for analysis of 1,2-Dichlorobenzene (1,2-DCB) and 1,4-Dichlorobenzene (1,4-DCB) by 8270D were more than the lab's method detection limit (MDL) but less than the lab's practical quantitation limit (PQL) for these analytes.
- **Findings:** Detections of 1,2-DCB and 1,4-DCB between the lab's MDL and PQL in samples MW-20A, Field Duplicate 1 (MW-20A), OW-15, OW-16A, and OW-21A collected in April 2021 have been qualified as estimated (J).

3.3 Accuracy

3.3.1 Blanks

- **Evaluation:** No analytes were detected in field blank samples or laboratory method blank samples.
- **Findings:** No data have been qualified on the basis of detections of COCs in blank samples.

3.3.2 Sample Dilutions

- **Evaluation:** Certain samples required dilution to bring the sample concentration within the instrument calibration range or due to evidence of matrix interference. Consequently, as specified by relevant methods, reporting limits were elevated proportional to the dilution.
- **Findings:** No data have been qualified on the basis of dilutions.

3.3.3 Surrogate Recoveries

3.3.3.1 Volatile Organic Compounds

- **Evaluation:** Surrogate recoveries for VOC analyses for all samples met project specific DQOs.
- **Findings:** No data were qualified on the basis of surrogate recoveries for VOC analyses.

3.3.3.2 Semi-Volatile Organic Compounds

- **Evaluation:** Surrogate recoveries for SVOC analyses for all samples met project specific DQOs.
- **Findings:** No data were qualified on the basis of surrogate recoveries for SVOC analyses.

3.3.3.3 PCBs

- **Evaluation:** Surrogate recoveries of decachlorobiphenyl (DCB) were less than project DQOs, but greater than or equal to 10%, for the analysis of polychlorinated biphenyls for samples OW-16A F, OW-08A F, Purge Water, T-18, OWR-13, T-10, and OWR-3S collected in April 2021, and for MW-16, MW-01B, and MW-12A collected in October 2021.
- **Findings:** For PCB analytes in samples OW-16A F, OW-08A F, Purge Water, T-18, OWR-13, T-10, and OWR-3S collected in April 2021, and MW-16, MW-01B, and MW-12A collected in October 2021, detected results were qualified as

estimated (J) and results reported as less than the reporting limit were qualified as estimated (UJ).

3.3.3.4 *Organochlorine Pesticides*

- **Evaluation:** Surrogate recoveries of Triphenylphosphate (TPP) were less than the project DQOs for the Organochlorine Pesticides analysis of the samples collected in April 2021 from wells MW-16 and OW-21A.
- **Findings:** For organochlorine pesticide analytes in samples MW-16 and OW-21A collected in April 2021, detected results were qualified as estimated (J) and results reported as less than the reporting limit were qualified as estimated (UJ) in accordance with the National Functional Guidelines for Organic Superfund Methods Data Review (EPA, 2017).

3.3.4 Laboratory Standards

3.3.4.1 *Semi-Volatile Organic Compounds*

- **Evaluation:** Internal standard (ISTD) recoveries were high in samples MW-20A and Field Duplicate 1 (MW-20A) collected in April 2021 for the 8270D SIM analyses because they were added to the login after the extracts had already been spiked.
- **Findings:** Corrected ISTD concentrations were accounted for and final results were calculated correctly, so no data were qualified on the basis of SVOC laboratory standards.

3.3.4.2 *Organochlorine Pesticides*

- **Evaluation:** Internal standard (ISTD) recoveries exceeded control limits in samples MW-20A and Field Duplicate 1 (MW-20A) for 8141B in one column.
- **Findings:** Control limits were met in the second column, so no data were qualified on the basis of Organochlorine Pesticides laboratory standards.

3.3.5 Laboratory Control Samples

3.3.5.1 *Semi-Volatile Organic Compounds*

- **Evaluation:** Recoveries of O,O,O-Triethylphosphorothioate in the LCS/LCSD in sample MW-12A collected in April 2021 and in samples MW-20A and Duplicate (MW-20A) collected in October 2021, were higher than project DQOs.
- **Findings:** The detections of O,O,O-Triethylphosphorothioate in the associated samples MW-12A collected in April 2021, and MW-20A and Duplicate (MW-20A) collected in October 2021, were qualified as estimated (J).

3.3.6 Matrix Spikes

3.3.6.1 Arochlor Analyses

- **Evaluation:** Recoveries of PCB-1016 and PCB-1260 in the MS/MSD sample collected at MW-20A in April 2021 (164% and 147%, respectively) were greater than project DQOs (135%).
- **Findings:** PCB-1016 and PCB-1260 were not detected in the parent sample MW-20A nor in the Duplicate (Field Duplicate 1). No data were qualified on the basis of MS/MSD recoveries.

3.4 Precision

3.4.1 Field Duplicates

- **Evaluation:** Seven field duplicate pairs were analyzed and results having at least one detected analyte among the pair were included in the field precision comparison. Analyte pairs having an RPD of less than 35%, as specified in the SAP, were considered to be within control (see Table F.3). Duplicate samples met the project DQO for precision with five exceptions, all from the April 2021 event.
 - i. The RPD for Mercury in OW-10 F/Field Duplicate 4 F was 43.8%.
 - ii. The RPD for Beryllium in OW-10 F/Field Duplicate 4 F was not calculated since the analyte was detected only in Field Duplicate 4 F and not in the original OW-10 F sample.
 - iii. The RPD for Manganese in OWR-14D F/Field Duplicate 2 F was not calculated since the analyte was detected only in Field Duplicate 2 F and not in the original OWR-14D sample.
 - iv. The RPD for Homolog Specific Total PCBs in OWR-14D F/Field Duplicate 2 F was not calculated since the analyte was detected only in Field Duplicate 2 F and not in the original OWR-14D sample. However, the detection (0.1 µg/L) was very close to the reporting limit.
 - v. The RPD for Trichlorobiphenyl in OWR-14D F/Field Duplicate 2 F was not calculated since the analyte was detected only in Field Duplicate 2 F and not in the original OWR-14D sample. However, the detection (0.1 µg/L) was very close to the reporting limit.
- **Findings:**
 - i. For Mercury results in OW-10 F and Field Duplicate 4 F collected in April 2021, detected results were qualified as estimated (J).

- ii. For Beryllium results in OW-10 F and Field Duplicate 4 F collected in April 2021, detected results were qualified as estimated (J) and results reported as less than the reporting limit were qualified as estimated (UJ).
- iii. For Manganese results in OWR-14D F and Field Duplicate 2 F collected in April 2021, detected results were qualified as estimated (J) and results reported as less than the reporting limit were qualified as estimated (UJ).
- iv. For Homolog Specific Total PCBs results in OWR-14D F and Field Duplicate 2 F collected in April 2021, detected results were qualified as estimated (J) and results reported as less than the reporting limit were qualified as estimated (UJ).
- v. For Trichlorobiphenyl results in OWR-14D F and Field Duplicate 2 F collected in April 2021, detected results were qualified as estimated (J) and results reported as less than the reporting limit were qualified as estimated (UJ).

3.4.2 Matrix Spike Duplicates

- **Evaluation:** The RPD for PCB-1016 in the MS/MSD collected in April 2021, and the RPD for PCB-1260 in MS/MSD collected in October 2021, were 59% and 39%, respectively, above the 15% upper limit according to the National Functional Guidelines for Organic Superfund Methods Data Review (EPA, 2017).
- **Findings:** PCB-1016 and PCB-1260 were not detected in the parent sample MW-15. No data were qualified on the basis of MS/MSD precision.

4.0 SUMMARY AND ACHIEVEMENT OF DATA QUALITY OBJECTIVES

The analytical data have been determined to be usable for the intended purpose of i) verifying that a release to groundwater from WMA I has not occurred; ii) monitoring concentrations of constituents of concern (COCs) in groundwater; and iii) evaluating the effectiveness of corrective action efforts being implemented at WMA II, SWMU 1, the well OW-21A Corrective Action Area, and the OW-10 Corrective Action Area. Completeness was calculated as 100%, based on a total of 881 individual analytes of which no values were rejected. Therefore, the completeness criterion of 85% specified in the SAP was exceeded by a wide margin.

Notes:

1. Samples analyzed by Eurofins TestAmerica Laboratories, Inc. Denver, Eurofins TestAmerica Laboratories, Inc. Savannah, and Eurofins Lancaster Laboratories Environmental.

2. DCB = Decachlorobiphenyl
 LCS = Lab Control Sample
 LCSD = Lab Control Sample Duplicate
 MDL = Method Detection Limit
 PCB = Polychlorinated Biphenyl
- PQL = Practical Quantitation Limit
 RL = Reporting Limit
 RPD = Relative Percent Difference
 TPP = Triphenylphosphate

3. Lab Qualifier Codes:

- <U = Analyte was not detected at or above the reporting limit
 H = Sample was prepped or analyzed beyond the specified holding time
 J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
 *+ = LCS and/or LCSD is outside acceptance limits, high biased.
 *- = LCS and/or LCSD is outside acceptance limits, low biased.
 *1 = LCS/LCSD RPD exceeds control limits.

4. Validation Qualifier Codes:

- J = Estimated, the analyte was detected and identified
 UJ = Not detected, estimated

 4-NITROPHENOL - RCRA CORRECTIVE ACTION MONITORING**

Solutia Inc., Anniston, Alabama
 RCRA Post-Closure Permit No. ALD 004 019 048
 Consent Decree Docket No. 1:02-ec-0749-KOB

Date Analyzed: **15 February 2022**
 Facility: **Solutia, Anniston**

Constituent: **4-Nitrophenol**
 Concentration Units: **µg/L**

Well Identification:		OW-21A	OW-21A				
Sampling Event	Date	4-NITROPHENOL CONCENTRATION (µg/L)					
1	Apr-03	25					
2	Apr-04	30000	30000				
3	Apr-05	16000	16000				
4	Apr-06	31000	31000				
5	Apr-07	9500	9500				
6	Apr-08	13000	13000				
7	Apr-09	19000	19000				
8	Apr-10	21000	21000				
9	Apr-11	12000	12000				
10	May-12	18000	18000				
11	Apr-13	12000	12000				
12	Apr-14	17000	17000				
13	Apr-15	14000	14000				
14	Apr-16	19000	19000				
15	Apr-17	17000	17000				
16	Apr-18	11000	11000				
17	Apr-19	11000	11000				
18	May-20	35000	35000				
19	Apr-21	18000	18000				
Coefficient of Variation:		0.48	0.41				
Mann-Kendall Statistic (S):		4	-14				
Confidence Factor:		54.1%	68.7%				
Concentration Trend:		No Trend	Stable				

Notes:

- At least four independent sampling events per well are required for calculating the trend. *Methodology is only valid for 4 to 40 samples.*
- Confidence in Trend = Confidence (in percent) that constituent concentration is increasing (S>0) or decreasing (S<0).
 ≥ 90% = Probably Increasing or Decreasing; >95% = Increasing or Decreasing.
- Methodology based on "MAROS: A Decision Support System for Optimizing Monitoring Plans", J.J. Aziz, M. Ling, H.S. Rifai, C.J. Newell, and J.R. Gonzales, *Ground Water*, 41(3):355-367, 2003.
- Non-detects are shown in blue (e.g., 0.0007), and are quantified as one-half of the method detection limit for calculation of Mann-Kendall statistics.
- For events with duplicate samples, the trend calculation is based on the original sample result. See Appendix E for duplicate sample results.
- When more than 75% of the samples in a given well are non-detect results, a trend is not calculated to avoid calculating a trend on detection limits.

Coefficient of Variation:		2.98	1.50	0.58	2.55	0.61		
Mann-Kendall Statistic (S):		-82	141	2	-67	64		
Confidence Factor:		88.4%	98.1%	50.6%	99.0%	95.2%		
Concentration Trend:		No Trend	Increasing	No Trend	Decreasing	Increasing		

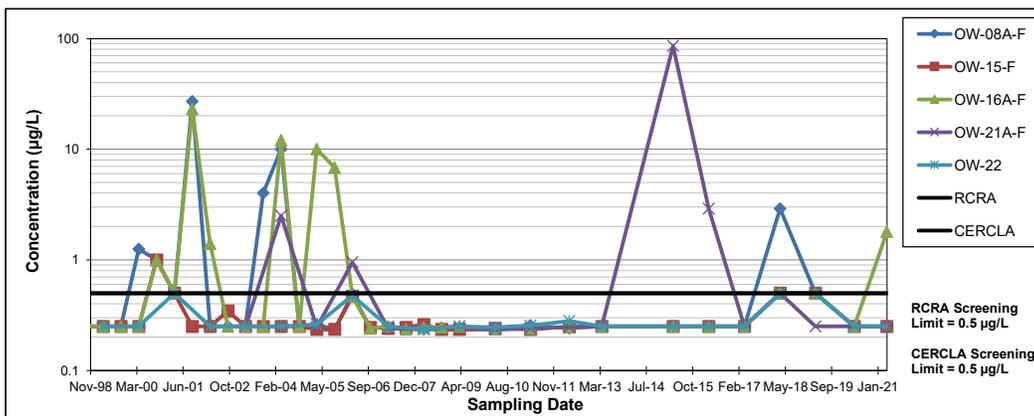

- Notes:**
- At least four independent sampling events per well are required for calculating the trend. Methodology is only valid for 4 to 40 samples.
 - Confidence in Trend = Confidence (in percent) that constituent concentration is increasing (S>0) or decreasing (S<0).
 ≥ 90% = Probably Increasing or Decreasing; >95% = Increasing or Decreasing.
 - Methodology based on "MAROS: A Decision Support System for Optimizing Monitoring Plans", J.J. Aziz, M. Ling, H.S. Rifai, C.J. Newell, and J.R. Gonzales, *Ground Water*, 41(3):355-367, 2003.
 - Non-detects are shown in blue (e.g., 0.0007), and are quantified as one-half of the method detection limit for calculation of Mann-Kendall statistics.
 - For events with duplicate samples, the trend calculation is based on the original sample result. See Appendix E for duplicate sample results.
 - When more than 75% of the samples in a given well are non-detect results, a trend is not calculated to avoid calculating a trend on detection limits.

1	Apr-17	6.2					
2	Apr-18	1					
3	Apr-19	2.1					
4	May-20	5.1					
5	Apr-21	3.6					
Coefficient of Variation:		0.59					
Mann-Kendall Statistic (S):		0					
Confidence Factor:		40.8%					
Concentration Trend:		Stable					

Notes:

- At least four independent sampling events per well are required for calculating the trend. *Methodology is only valid for 4 to 40 samples.*
- Confidence in Trend = Confidence (in percent) that constituent concentration is increasing (S>0) or decreasing (S<0).
 ≥ 90% = Probably Increasing or Decreasing; >95% = Increasing or Decreasing.
- Methodology based on "MAROS: A Decision Support System for Optimizing Monitoring Plans", J.J. Aziz, M. Ling, H.S. Rifai, C.J. Newell, and J.R. Gonzales, *Ground Water*, 41(3):355-367, 2003.
- Non-detects are shown in blue (e.g., **0.0007**), and are quantified as one-half of the method detection limit for calculation of Mann-Kendall statistics.
- For events with duplicate samples, the trend calculation is based on the original sample result. See Appendix E for duplicate sample results.
- When more than 75% of the samples in a given well are non-detect results, a trend is not calculated to avoid calculating a trend on detection limits.

GSI Job No. 6122

**2021 ANNUAL GROUNDWATER DETECTION MONITORING AND
CORRECTIVE ACTION EFFECTIVENESS REPORT**

Solutia, Inc., Anniston, Alabama
RCRA Post-Closure Permit ALD 004 019 048
Consent Decree Docket No. 1:02-ec-0749-KOB

APPENDIX H: LABORATORY REPORTS

APRIL 2021 LABORATORY REPORTS

This page has been intentionally left blank.

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: RCRA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-197807-1
 Validation Date: 27 October 2021

Laboratory: Eurofins TestAmerica Savannah

SDG #: 680-197807-1

Analytical Method (type and no.): VOCs (8260B), SVOCS (8270D), PCBs (8081B/8082), Pesticides (8141B)

Matrix: Air Soil/Sed. Water Waste

Sample Names: MW-16, MW-16F, MW-20A, MW-20AF, Field Duplicate 1, MW-15, MW-15F, OW-15, OW-15F, TRIP BLANK 20210416R

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>WBS also sampled MW-16 and MW-16F</u>
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
f) Field QC noted? <u>MW-20A, TRIP BLANK 20210416R</u>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Field Duplicate 1 (@ MW-20A), MS/MSD (@</u>
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp, pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
j) Does the laboratory narrative indicate deficiencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

Note Deficiencies: Internal standard recoveries were high in samples MW-20A and Field Duplicate 1 since 8270 SIM was added to the login after the extracts had already been spiked and analyzed for 8270D. Correct ISTD concentrations were accounted for and the final results were calculated correctly, so no qualification is required. Internal standard recoveries of Method 8141B on MW-20A and Field Duplicate 1 exceeded control limits on one column, but met the limit on the other, so no qualification is required.

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Sample times were inadvertently left off for some Sample IDs. Sampling times for these sample IDs are as follows: MW-15 & MW-15F @ 09:22; OW-15 & OW-15F @ 13:35.</u>
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were hold times met for sample analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
e) Were appropriate reporting limits achieved? <u>not calibrated to the specified reporting limit (1 ug/L) for 1,2-DCB and 1,4-DCB.</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>The instrument used for Method 8270D was</u>
f) Were any sample dilutions noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
g) Were any matrix problems noted? <u>8141B for MW-16 which caused surrogate recovery issues.</u>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Evidence of matrix interference in Method</u>

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Original – MW-20A</u>
				<u>Duplicate – Field Duplicate 1</u>
b) Were field dup. precision criteria met (note RPD)? <u>DCB= 8%, o,o,o-Triethylphosphorothioate= 4.4%</u>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Chlorobenzene= 0%, 1,2-DCB= 0%, 1,4-</u>
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Multiple LCSDs. All RPDs ≤ 2%</u>
d) Were lab dup. precision criteria met (note RPD)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>PCB-1016 recovery for Method 8081B/8082A = 164% (NFG QC upper limit = 135%), PCB-1260 recovery = 147% (NFG QC upper limit = 135%)</u>
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>PCB-1016 MS/MSD RPD for Method 8081B/8082A= 59% (NFG QC upper limit = 15%)</u>

Surrogate Spikes	YES	NO	NA	COMMENTS
a) Were surrogate recoveries within control limits?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>TCX recovery in MW-16 for Method 8081B/8082A= 584% (NFG QC upper limit = 150%), TPP recovery in MW-16 for Method 8141B = 59% (Lab QC lower limit = 60%)</u>
b) Were surrogate recoveries not calculated due to dilutions?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Comments/Notes:

- (1) NFG= National Functional Guidelines for Organic Superfund Methods Data Review.
- (2) 1,4-DCB and 1,2-DCB detections in MW-20A and Field Duplicate 1 are qualified as J because detections fall between the MDL and PQL since the instrument was not calibrated to the proper RL.
- (3) High recoveries of PCB-1016 and PCB-1260 in MSD samples from MW-20A occurred and MS/MSD RPD of PCB-1016 exceeded lab control limits in samples from MW-20A. Specific conductance is significantly higher and ORP is significantly lower at MW-20A than at other sampled wells, suggesting these matrix problems are likely restricted to MW-20A. Additionally, PCB-1016 and PCB-1260 were not detected in MW-20A nor in Field Duplicate 1, therefore no qualification is required.
- (4) High recoveries of surrogate TCX for Method 8082A in MW-16 occurred; however, all analytes of this method were not detected, so no qualification is required.
- (5) Marginally low recoveries of surrogate TPP for Method 8141B in MW-16 occurred, therefore, non-detects are qualified as UJ.

Data Qualification:

Sample Name	Constituent(s)	Result	Qualifier	Reason
MW-20A	1,2-DCB	2.6 ug/L	J	Detection between MDL and PQL
MW-20A	1,4-DCB	1.3 ug/L	J	Detection between MDL and PQL
Field Duplicate 1	1,2-DCB	2.6 ug/L	J	Detection between MDL and PQL
Field Duplicate 1	1,4-DCB	1.2 ug/L	J	Detection between MDL and PQL
OW-15	1,2-DCB	2.0 ug/L	J	Detection between MDL and PQL
MW-16	Parathion	<1.0 ug/L	UJ	Low TPP recovery
MW-16	Sulfotepp	<1.5 ug/L	UJ	Low TPP recovery

Definitions/Glossary

Client: GSI Environmental, Inc
Project/Site: Anniston RCRA April 2020

Job ID: 680-197807-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*3	ISTD response or retention time outside acceptable limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
E	Result exceeded calibration range.
F1	MS and/or MSD recovery exceeds control limits.
F2	MS/MSD RPD exceeds control limits
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1-	Surrogate recovery exceeds control limits, low biased.
S1+	Surrogate recovery exceeds control limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 4/17/2021 10:05 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.6° C, 1.3° C, 1.9° C, 3.3° C, 3.8° C, 3.9° C and 5.6° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270D: The following analyte has been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: o,o',o''-Triethylphosphorothioate (29.6%). This analyte may have a %D >20% but must be <50% in the continuing calibration verification (CCV).

Method 8270D SIM: Internal standard (ISTD) response for the following samples were outside of acceptance limits: MW-20A (680-197807-3), Field Duplicate 1 (680-197807-5) and (MB 680-665376/10-A). The samples were spiked with the internal standard for the 8270D analysis which is 20X higher than the SIM ICAL. The results have been calculated accordingly, flagged and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8081B/8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: MW-16 (680-197807-1). These results have been reported and qualified.

Method 8141B: Internal standard (ISTD - Tributyl phosphate) response for the following samples exceeded the control limit on Column RTX-OPP2 Phosphated Pesticides: MW-20A (680-197807-3[MS]), (CCV 280-535256/38) and (CCV 280-535256/45). As such, the sample results associated with this ISTD were reported from the other column, which met ISTD acceptance criteria. preparation batch 280-533387 and analytical batch 280-535256.

Method 8141B: Surrogate recovery for the following sample was outside control limits: MW-16 (680-197807-1). Evidence of matrix interference is present; therefore, re-extraction and/or re-analysis was not performed. preparation batch 280-533387 and analytical batch 280-535256.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Login Sample Receipt Checklist

Client: GSI Environmental, Inc

Job Number: 680-197807-1

Login Number: 197807

List Source: Eurofins TestAmerica, Savannah

List Number: 1

Creator: Mookan, Darmal

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: RCRA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-197821-1
 Validation Date: 29 October 2021

Laboratory: Eurofins TestAmerica Savannah

SDG #: 680-197821-1

Analytical Method (type and no.): VOCs (8260B), SVOCS (8270D), PCBs (8081B/8082A), Pesticides (8141B)

Matrix: Air Soil/Sed. Water Waste

Sample Names: MW-12A, MW-14, OW-06A, OW-16A, OW-16AF, OW-21A, OW-21AF, MW-01B, MW-08, MW-09A, MW-11A, OW-08A, OW-08AF, MW-13A, Trip Blank 20210415

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Sampling team indicated? <u>OW-08A, and OW-08AF</u>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>WBS also sampled OW-16A, OW-16AF,</u>
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
e) Sample type indicated (grab/composite)? <u>COC. All samples are grab samples.</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Sample types were inadvertently left off the</u>
f) Field QC noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Trip Blank 20210415</u>
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp, pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
j) Does the laboratory narrative indicate deficiencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

Note Deficiencies: Method 8270D LL LCS recovered outside of control limits for 1,4-DCB and 4-Nitrophenol. The associated sample, OW-08A, was re-prepared/ analyzed outside of holding time, but both sets of data are reported where priority was given to LCS recovery within control limits, then preparation/analysis within holding time. Internal standard recoveries of Method 8141B on CCV exceeded control limits on one column, but met the limit on the other, so no qualification is required.

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed? <u>COC. All samples are grab samples.</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Sample types were inadvertently left off the</u>
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Method 8270D LL for OW-08A was prepared 14 days after sample collection (i.e., >7 day holding time) for 1,4-DCB and 4-Nitrophenol.</u>
b) Were hold times met for sample analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
e) Were appropriate reporting limits achieved?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>The instrument used for Method 8270D was not calibrated to the specified reporting limit (1 ug/L) for 1,2-DCB and 1,4-DCB. As a result of dilution, a subset of analytes for Methods 8081B/8082A, 8141B, and 8260B in OW-16A and OW-21A did not achieve the appropriate RLs.</u>
f) Were any sample dilutions noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Dilutions noted in Method 8260B for OW-16A (DF=5) and OW-21A (DF=50), in Method 8141B for OW-21A (DF=500), in Method 8270D for OW-21A (DF=10 and 100 for 4-Nitrophenol), and in Method 8081B/8082A for OW-16A (DF=25) and OW-21A (DF=10).</u>
g) Were any matrix problems noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Dilution of OW-21A and OW-16A was required due to the nature of the sample matrices, which resulted in elevated RLs and surrogate recovery issues.</u>

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>O,O,O-Triethylphosphorothioate recovery = 135% (Lab QC upper limit = 130%), 4-Nitrophenol recovery = 19% (Lab QC lower limit = 25%).</u>

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were field dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Were lab dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Multiple LCSDs, all within RPD limits apart from 1,4-DCB RPD = 31%, 4-Nitrophenol RPD = 112% (Lab QC upper limit = 30%).</u>

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<u>No MS/MSD samples in this report.</u>
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Surrogate Spikes	YES	NO	NA	COMMENTS
a) Were surrogate recoveries within control limits?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>DCB recovery in OW-16AF for Method 8081B/8082A= 12%, in OW-08AF=13% (NFG QC lower limit= 30%), TPP recovery in OW-21A for Method 8141B= 44% (Lab QC lower limit= 60%)</u>
b) Were surrogate recoveries not calculated due to dilutions?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Recoveries not calculated for Methods 8270D and 8141B in OW-21A due to dilution.</u>

Comments/Notes:

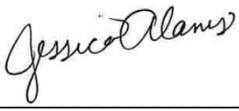

- (1) NFG=National Functional Guideline for Organic Superfund Methods Data Review.
- (2) 1,4-DCB and 1,2-DCB detections in OW-16A and OW-21A are qualified as J because detections fall between the MDL and PQL since the instrument was not calibrated to the proper RL.
- (3) Method 8270D LL for OW-08A was prepared outside of the holding time for 1,4-DCB and 4-Nitrophenol. These results were not detected; therefore, these results have been qualified as estimated UJ.
- (4) High recoveries of LCS/LCSD O,O,O-Triethylphosphorothioate for Method 8270D occurred in prep batch 664983; therefore, associated sample detections are qualified as estimated J.
- (5) Low recoveries of surrogate DCB for Method 8081B/8082A in OW-16AF and OW-08AF, and of surrogate TPP for Method 8141B in OW-21A occurred; therefore, non-detects are qualified as estimated UJ and detections are qualified as estimated J.

Data Qualification:

Sample Name	Constituent(s)	Result	Qualifier	Reason
OW-16A	1,2-DCB	2.4 ug/L	J	Detection between MDL and PQL
OW-16A	1,4-DCB	1.9 ug/L	J	Detection between MDL and PQL
OW-21A	1,2-DCB	17 ug/L	J	Detection between MDL and PQL
OW-08A	1,4-DCB	<1 ug/L	UJ	Extracted after holding time
OW-08A	4-Nitrophenol	<8.0 ug/L	UJ	Extracted after holding time
MW-12A	O,O,O-Triethylphosphorothioate	12 ug/L	J	LCS/LCSD recovery outside acceptance limits
OW-16AF	PCB-1016, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-16AF	PCB-1221, Dissolved	1.8 ug/L	J	Low DCB recovery
OW-16AF	PCB-1232, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-16AF	PCB-1242, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-16AF	PCB-1248, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-16AF	PCB-1254, Dissolved	<0.5 ug/L	UJ	Low DCB recovery

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

OW-16AF	PCB-1260, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-16AF	PCB-1268, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-21A	Parathion	3300 ug/L	J	Low TPP recovery
OW-21A	Sulfotepp	<81 ug/L	UJ	Low TPP recovery; elevated RL due to dilution
OW-08AF	PCB-1016, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-08AF	PCB-1221, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-08AF	PCB-1232, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-08AF	PCB-1242, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-08AF	PCB-1248, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-08AF	PCB-1254, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-08AF	PCB-1260, Dissolved	<0.5 ug/L	UJ	Low DCB recovery
OW-08AF	PCB-1268, Dissolved	<0.5 ug/L	UJ	Low DCB recovery

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
S1+	Surrogate recovery exceeds control limits, high biased.

GC/MS Semi VOA

Qualifier	Qualifier Description
*-	LCS and/or LCSD is outside acceptance limits, low biased.
*+	LCS and/or LCSD is outside acceptance limits, high biased.
*1	LCS/LCSD RPD exceeds control limits.
D	Surrogate or matrix spike recoveries were not obtained because the extract was diluted for analysis; also compounds analyzed at a dilution may be flagged with a D.
H	Sample was prepped or analyzed beyond the specified holding time
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
S1-	Surrogate recovery exceeds control limits, low biased.

GC Semi VOA

Qualifier	Qualifier Description
D	Sample results are obtained from a dilution; the surrogate or matrix spike recoveries reported are calculated from diluted samples.
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1-	Surrogate recovery exceeds control limits, low biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
±	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 4/17/2021 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 10 coolers at receipt time were 2.9° C, 3.0° C, 4.0° C, 4.7° C, 4.7° C, 4.7° C, 4.9° C, 5.3° C, 5.8° C and 5.9° C.

GC/MS VOA

Method 8260B: The LCS was biased high for 1,2-Dichloroethane-d4 surrogate by 5%. All other QC and sample recoveries were acceptable and within control limits, and sample target analyte recoveries were acceptable. There is insufficient time to rerun samples in hold time, data has been qualified and reported. (LCS 680-666174/3)

Method 8260B: The following sample was diluted to bring the concentration of target analytes within the calibration range: OW-16A (680-197821-4). Elevated reporting limits (RLs) are provided.

Method 8260B: The following sample was diluted due to the abundance of non-target analytes: OW-21A (680-197821-6). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270D: The following analyte has been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: o,o',o"-Triethylphosphorothioate (29.6%). This analyte may have a %D >20% but must be <50% in the continuing calibration verification (CCV).

Method 8270D LL: The continuing calibration verification (CCV) analyzed in batch 680-666045 was outside the method criteria for the following analyte(s): 2,4,6-Tribromophenol (Surr). A CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated. Batch QC and samples are within control limits for surrogate recovery.

Method 8270D LL: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 680-665377 and analytical batch 680-666045 recovered outside control limits for the following analyte(s): 4-Nitrophenol. 4-Nitrophenol has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. Batch precision also exceeded control limits for this analyte. These results have been reported and qualified.

Method 8270D LL: The RPD of the laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for preparation batch 680-665377 and analytical batch 680-666045 recovered outside control limits for the following analytes: 1,4-Dichlorobenzene.

Methods 8270D, 8270E: Surrogate 2-Fluorophenol and Phenol-d5 are outside upper control limit for the continuing calibration verification (CCV). The affected surrogates are within surrogate control limits in the CCV. All associated sample and QC surrogates recovered within control limits; therefore, the data has been reported. (CCVIS 680-666066/2)

Method 8270D: The following analyte has been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: 4-Nitrophenol (36.1 %D) and o,o',o"-Triethylphosphorothioate (30.6 %D). These analytes may have a %D >20% but must be <50% in the CCV.

Method 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 680-664983 and analytical batch 680-666066 recovered outside control limits for the following analyte: o,o',o"-Triethylphosphorothioate. o,o',o"-Triethylphosphorothioate has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

Case Narrative

Client: GSI Environmental, Inc
Project/Site: Anniston RCRA April 2020

Job ID: 680-197821-1

Job ID: 680-197821-1 (Continued)

Laboratory: Eurofins Savannah (Continued)

Method 8270D: The following sample was diluted due to the nature of the sample matrix: OW-21A (680-197821-6). As such, surrogate recoveries are below the calibration range or are not reported, and elevated reporting limits (RLs) are provided.

Method 8270D LL: The laboratory control sample (LCS) for preparation batch 680-665377 and analytical batch 680-666045 recovered outside control limits. The associated sample(s) was re-prepared and/or re-analyzed outside holding time. Both sets of data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8081B/8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: OW-08AF (680-197821-14). These results have been reported and qualified.

Method 8141B: The following sample was diluted due to the nature and color of the sample matrix: OW-21A (680-197821-6). Elevated reporting limits (RLs) are provided. preparation batch 280-533387 and analytical batch 280-535256.

Method 8141B: Internal standard (ISTD - Tributyl phosphate) response for the following samples exceeded the control limit on Column RTX-OPP2 Phosphated Pesticides: (CCV 280-535256/38), (CCV 280-535256/45) and (680-197807-A-3-B MS). As such, the sample results associated with this ISTD were reported from the other column, which met ISTD acceptance criteria. preparation batch 280-533387 and analytical batch 280-535256.

Method 8141B: The following sample was diluted to bring the concentration of target analytes within the calibration range: OW-21A (680-197821-6). Elevated reporting limits (RLs) are provided. preparation batch 280-533387 and analytical batch 280-535467.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: CERCLA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-197821-2
 Validation Date: 02 November 2021

Laboratory: Eurofins TestAmerica Savannah

SDG #: 680-197821-2

Analytical Method (type and no.): SVOCS (8270D), PCBs (8081B/8082A), Pesticides (8141B)

Matrix: Air Soil/Sed. Water Waste _____

Sample Names: T-10, OWR-3S

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
e) Sample type indicated (grab/composite)? <u>COC. All samples are grab samples.</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Sample types were inadvertently left off the</u>
f) Field QC noted?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp, pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
j) Does the laboratory narrative indicate deficiencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
Note Deficiencies: _____				

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed? <u>COC. All samples are grab samples.</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Sample types were inadvertently left off the</u>
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were hold times met for sample analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
e) Were appropriate reporting limits achieved?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
f) Were any sample dilutions noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
g) Were any matrix problems noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were field dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>LCSD RPD = 14% (Lab limit= 50%)</u>
d) Were lab dup. precision criteria met (note RPD)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<u>No MS/MSD samples in this report.</u>
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Surrogate Spikes	YES	NO	NA	COMMENTS
a) Were surrogate recoveries within control limits? <u>Method 8081B/8082A= 12% and 13%, respectively (NFG QC lower limit= 30%).</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>DCB recovery in T-10 and OWR-3S for</u>
b) Were surrogate recoveries not calculated due to dilutions?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Comments/Notes:

- (1) NFG= National Functional Guidelines for Organic Superfund Methods Data Review.
- (2) Low recoveries of surrogate DCB for Method 8081A/8082B in T-10 and OWR-3S occurred; therefore, non-detects are qualified as estimated UJ.

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Data Qualification:

Sample Name	Constituent(s)	Result	Qualifier	Reason
T-10	PCB-1016	<0.5 ug/L	UJ	Low DCB recovery
T-10	PCB-1221	<0.5 ug/L	UJ	Low DCB recovery
T-10	PCB-1232	<0.5 ug/L	UJ	Low DCB recovery
T-10	PCB-1242	<0.5 ug/L	UJ	Low DCB recovery
T-10	PCB-1248	<0.5 ug/L	UJ	Low DCB recovery
T-10	PCB-1254	<0.5 ug/L	UJ	Low DCB recovery
T-10	PCB-1260	<0.5 ug/L	UJ	Low DCB recovery
T-10	PCB-1268	<0.5 ug/L	UJ	Low DCB recovery
OWR-3S	PCB-1016	<0.5 ug/L	UJ	Low DCB recovery
OWR-3S	PCB-1221	<0.5 ug/L	UJ	Low DCB recovery
OWR-3S	PCB-1232	<0.5 ug/L	UJ	Low DCB recovery
OWR-3S	PCB-1242	<0.5 ug/L	UJ	Low DCB recovery
OWR-3S	PCB-1248	<0.5 ug/L	UJ	Low DCB recovery
OWR-3S	PCB-1254	<0.5 ug/L	UJ	Low DCB recovery
OWR-3S	PCB-1260	<0.5 ug/L	UJ	Low DCB recovery
OWR-3S	PCB-1268	<0.5 ug/L	UJ	Low DCB recovery

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
S1-	Surrogate recovery exceeds control limits, low biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 4/17/2021 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 10 coolers at receipt time were 2.9° C, 3.0° C, 4.0° C, 4.7° C, 4.7° C, 4.7° C, 4.9° C, 5.3° C, 5.8° C and 5.9° C.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC Semi VOA

Method 8081B/8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: T-10 (680-197821-12) and OWR-3S (680-197821-16). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

DCBP = DCB Decachlorobiphenyl

Eurofins TestAmerica, Savannah

Surrogate Summary

Client: GSI Environmental, Inc
Project/Site: Anniston CERCLA April 2020
TCX = Tetrachloro-m-xylene

Job ID: 680-197821-2

Method: 8081B/8082A - Organochlorine Pesticides and Polychlorinated Biphenyls by Gas Chromatography

Matrix: Water

Prep Type: Total/NA

Percent Surrogate Recovery (Acceptance Limits)

Lab Sample ID	Client Sample ID	DCBP1 (14-130)	TCX1 (40-130)
LCS 680-666147/20-A	Lab Control Sample	76	77

Surrogate Legend

DCBP = DCB Decachlorobiphenyl

TCX = Tetrachloro-m-xylene

Method: 8141B - Organophosphorous Compounds by Gas Chromatography, Capillary Column Technique

Matrix: Water

Prep Type: Total/NA

Percent Surrogate Recovery (Acceptance Limits)

Lab Sample ID	Client Sample ID	TPP1 (60-154)
680-197807-A-3-B MS	Matrix Spike	94
680-197807-A-3-C MSD	Matrix Spike Duplicate	95
680-197821-12	T-10	89
LCS 280-533387/2-A	Lab Control Sample	84
MB 280-533387/1-A	Method Blank	108

Surrogate Legend

TPP = Triphenylphosphate

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis of the matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Possible Hazard Identification
 Unconfirmed
 Deliverable Requested: I, II, III, IV, Other (specify)
 Primary Deliverable Rank: 2
 Special Instructions/QC Requirements:
 Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
 Return To Client Disposal By Lab Archive For _____ Months

Empty Kit Relinquished by: _____ Date: _____ Time: _____
 Relinquished by: *Carla Bourde* Date: *4/29/21* Time: *14:50*
 Relinquished by: _____ Date: _____ Time: _____
 Relinquished by: _____ Date: _____ Time: _____
 Custody Seals Intact: Yes No Custody Seal No.: _____
 Cooler Temperature(s) °C and Other Remarks: *01/3.5/24/6-1 2kg 08/04*

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: CERCLA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-197858-1
 Validation Date: 03 November 2021

Laboratory: Eurofins TestAmerica Savannah

SDG #: 680-197858-1

Analytical Method (type and no.): VOCs (8260B), SVOCS (8270D), PCBs (8081B/8082A), Pesticides (8141B)

Matrix: Air Soil/Sed. Water Waste

Sample Names: Field Duplicate 3, Field Duplicate 4, Field Duplicate 4F, OW-10, OW-10F, OWR-11, OWR-11F, OWR-15D, OWR-15DF, T-04, T-04F, T-09, T-09F, T-10, T-20F, Trip Blank 2021 0419 C

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
f) Field QC noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Field Duplicate 4, Field Duplicate 4F (@OW-10, OW-10F), MS/MSD (@ OW-10) Field Duplicate 3 (@ T-09), Trip Blank 2021 0419 C</u>
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp., pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
j) Does the laboratory narrative indicate deficiencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

Note Deficiencies: Surrogate Phenol-d5 is outside upper control limit for Method 8270D for the CCV; however, all associated samples are within control limits, so no qualification is required.

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Method 8141B for T-09 and Field Duplicate 3 was prepared 9 days after sample collection (i.e., >7 day holding time).</u>
b) Were hold times met for sample analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
e) Were appropriate reporting limits achieved?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>As a result of dilution, a subset of analytes for Method 8081B/8082A in T-04, T-04F, OWR-11, and OWR-11F did not achieve the appropriate RL of 0.5 ug/L.</u>
f) Were any sample dilutions noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Dilutions noted for Method 8081B/8082A for T-04 (DF=10), T-04F (DF=10), OWR-11 (DF=25), OWR-11F (DF=10), and OWR-15D (DF=5).</u>
g) Were any matrix problems noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Original – OW-10, Duplicate - Field Duplicate 4; Original – OW-10F, Duplicate – Field Duplicate 4F; Original – T-09, Duplicate – Field Duplicate 3</u>
b) Were field dup. precision criteria met (note RPD)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>OW-10 and Field Duplicate 4: Trichloroethene= 2.5%. T-09 and Field Duplicate 3: PCB-1248= 23.1%.</u>
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Multiple LCSDs, all RPDs ≤ 4%</u>
d) Were lab dup. precision criteria met (note RPD)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Surrogate Spikes	YES	NO	NA	COMMENTS
a) Were surrogate recoveries within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were surrogate recoveries not calculated due to dilutions?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Comments/Notes:

- (1) Method 8141B for T-09 and Field Duplicate 3 was prepared outside of holding time. All results were not detected; therefore, they have been qualified as estimated UJ.

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Data Qualification:

Sample Name	Constituent(s)	Result	Qualifier	Reason
T-09	Parathion	<1 ug/L	UJ	Extracted after holding time
Field Duplicate 3	Parathion	<1 ug/L	UJ	Extracted after holding time

a) Was MS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Comments/Notes:

- (1) Mercury of Method 7470A for OW-10F and Field Duplicate 4F resulted in an RPD exceeding acceptance limits; therefore, these results have been qualified as estimated J.
- (2) Beryllium of Method 6010C RPD not calculated due to a non-detect result; therefore, results have been qualified as estimate J or UJ.

Data Qualification:

QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Sample Name	Constituent(s)	Result	Qualifier	Reason
OW-10F	Mercury	0.0041 mg/L	J	RPD between original and duplicate >35%
Field Duplicate 4F	Mercury	0.0064 mg/L	J	RPD between original and duplicate >35%
OW-10F	Beryllium	<0.004 mg/L	UJ	RPD between original and duplicate not calculated due to a non-detect result
Field Duplicate 4F	Beryllium	0.0045 mg/L	J	RPD between original and duplicate not calculated due to a non-detect result

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: GSI Environmental, Inc
Project/Site: Anniston CERCLA April 2020

Job ID: 680-197858-1

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: GSI Environmental, Inc
Project/Site: Anniston CERCLA April 2020

Job ID: 680-197858-1

Job ID: 680-197858-1

Laboratory: Eurofins TestAmerica, Savannah

Narrative

**Job Narrative
680-197858-1**

Comments

No additional comments.

Receipt

The samples were received on 4/20/2021 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.9° C, 1.1° C, 1.4° C, 1.7° C, 2.5° C, 2.9° C and 3.9° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Methods 8270D, 8270E: Surrogate Phenol-d5 is outside upper control limit for the continuing calibration verification (CCV). All associated sample and QC surrogates recovered within control limits; therefore, the data has been reported. (CCVIS 680-666322/2)

Method 8270D: The following analyte has been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: 4-Nitrophenol (27.5%). This analytes may have a %D >20% but must be <50% in the continuing calibration verification (CCV).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: RCRA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-197858-2
 Validation Date: 05 November 2021

Laboratory: Eurofins TestAmerica Savannah

SDG #: 680-197858-2

Analytical Method (type and no.): VOCs (8260B), SVOCS (8270D), PCBs (8081B/8082A), Pesticides (8141B)

Matrix: Air Soil/Sed. Water Waste

Sample Names: OW-22, OW-22F, Trip Blank 20210419 R

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
f) Field QC noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Trip Blank 20210419 R</u>
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp., pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
j) Does the laboratory narrative indicate deficiencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Note Deficiencies: _____				

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment? <u>days after sample collection (i.e., >7 day holding time).</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Method 8141B for OW-22 was prepared 9</u>
b) Were hold times met for sample analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
e) Were appropriate reporting limits achieved?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
f) Were any sample dilutions noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
g) Were any matrix problems noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were field dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Multiple LCSDs, all RPDs ≤ 2%</u>
d) Were lab dup. precision criteria met (note RPD)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<u>No MS/MSD samples in this report</u>
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Surrogate Spikes	YES	NO	NA	COMMENTS
a) Were surrogate recoveries within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were surrogate recoveries not calculated due to dilutions?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Comments/Notes:

- (1) Method 8141B for OW-22 was prepared outside of holding time. All results were not detected; therefore, they have been qualified as estimated UJ.

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Data Qualification:

Sample Name	Constituent(s)	Result	Qualifier	Reason
OW-22	Parathion	<1 ug/L	UJ	Extracted after holding time
OW-22	Sulfotepp	<1.5 ug/L	UJ	Extracted after holding time

Signature: 

Date: 05 November 2021

QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: RCRA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-197858-2
 Validation Date: 05 November 2021

Laboratory: Eurofins TestAmerica Savannah SDG #: 680-197858-2
 Analytical Method (type and no.): Metals (6010C), Mercury (7470A)
 Matrix: Air Soil/Sed. Water Waste _____
 Sample Names: OW-22, OW-22F

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
f) Field QC noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp., pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
j) Does the laboratory narrative indicate deficiencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
Note Deficiencies: _____				

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were hold times met for sample analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
e) Were appropriate reporting limits achieved?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
f) Were any sample dilutions noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
g) Were any matrix problems noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were field dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
d) Were lab dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<u>No MS/MSD samples in this report.</u>
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: GSI Environmental, Inc
Project/Site: Anniston RCRA April 2020

Job ID: 680-197858-2

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 4/20/2021 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 0.9° C, 1.1° C, 1.4° C, 1.7° C, 2.5° C, 2.9° C and 3.9° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Method Summary

Client: GSI Environmental, Inc
Project/Site: Anniston RCRA April 2020

Job ID: 680-197858-2

Method	Method Description	Protocol	Laboratory
8260B	Volatile Organic Compounds (GC/MS)	SW846	TAL SAV
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	TAL SAV
8081B/8082A	Organochlorine Pesticides and Polychlorinated Biphenyls by Gas Chromatography	SW846	TAL SAV
8141B	Organophosphorous Compounds by Gas Chromatography, Capillary Column Technique	SW846	TAL DEN
6010C	Metals (ICP)	SW846	TAL SAV
7470A	Mercury (CVAA)	SW846	TAL SAV
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	TAL SAV
3510C	Liquid-Liquid Extraction (Separatory Funnel)	SW846	TAL DEN
3520C	Liquid-Liquid Extraction (Continuous)	SW846	TAL SAV
5030B	Purge and Trap	SW846	TAL SAV
7470A	Preparation, Mercury	SW846	TAL SAV

Protocol References:

SW846 = "Test Methods For Evaluating Solid Waste, Physical/Chemical Methods", Third Edition, November 1986 And Its Updates.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: CERCLA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-197955-1
 Validation Date: 05 November 2021

Laboratory: Eurofins TestAmerica Savannah

SDG #: 680-197955-1

Analytical Method (type and no.): VOCs (8260B), SVOCS (8270D), PCBs (8081B/8082A), Pesticides (8141B), PCB Homologs (680)

Matrix: Air Soil/Sed. Water Waste

Sample Names: T-06, T-06 F, T-18, T-18 F, OWR-13, OWR-13 F, OWR-14D, Field Duplicate 2, OWR-14D F, Field Duplicate 2 F, WEL-01, WEL-01 F, WEL-04, WEL-04 F, Equipment Blank, Trip Blank 20210420 C, Purge Water

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
f) Field QC noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Field Duplicate 2, Field Duplicate 2F (@ OWR-14D, OWR-14D F), Equipment Blank, Trip Blank 20210420 C</u>
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp. pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
j) Does the laboratory narrative indicate deficiencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
Note Deficiencies: _____				

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Were hold times met for sample analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
e) Were appropriate reporting limits achieved?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>As a result of dilution, a subset of analytes for Method 8081B/8082A in OWR-13 and for Method 680 in T-18 did not achieve the appropriate RLs; however, all results were detections above these elevated RLs, so no qualification is required.</u>
f) Were any sample dilutions noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Dilutions noted in Method 8081B/8082A for PCB-1221 in T-18 (DF= 5), T-18 F (DF=4) and for PCB 1248 and PCB-1254 in OWR-13 (DF=5) and in Method 680 for a subset of analytes in T-18 (DF=50) and in T-18 F and OWR-13 (DF=10).</u>
g) Were any matrix problems noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)? <u>Duplicate 2, Original – OWR-14D F, Duplicate – Field Duplicate 2 F.</u>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Original – OWR-14D, Duplicate – Field</u>
b) Were field dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>OWR-14D and Field Duplicate 2: Total Tetrachlorobiphenyls= 27.5%, Total Polychlorinated biphenyls= 25.9%, Total Trichlorobiphenyls= 23.5%. OWR-14D F and Field Duplicate 2 F: Total Polychlorinated biphenyls= not calculated (original= ND, duplicate= 0.1 ug/L), Total Trichlorobiphenyls= not calculated (original=ND, duplicate= 0.1 ug/L).</u>
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Multiple LCSDs. All RPDs ≤14%.</u>
d) Were lab dup. precision criteria met (note RPD)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<u>No MS/MSD samples in this report.</u>
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Surrogate Spikes	YES	NO	NA	COMMENTS
a) Were surrogate recoveries within control limits? <u>Water for Method 8081B/8082A= 11% (NFG lower limit= 30%).</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>DCB recovery in T-18, OWR-13, and Purge</u>
b) Were surrogate recoveries not calculated due to dilutions?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Comments/Notes:

- (1) NFG= National Functional Guidelines for Organic Superfund Methods Data Review.

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

- (2) RPD for Total Polychlorinated biphenyls and Total Trichlorobiphenyls of Method 680 for OWR-14D F and Field Duplicate 2 F was not calculated due to a non-detect result; therefore, these analytes have been qualified as estimated J or UJ.
- (3) Low recoveries of surrogate DCB for Method 8081B/8082A in T-18, OWR-13, and Purge Water occurred; therefore, all detections have been qualified as estimated J and non-detects UJ.

Data Qualification:

Sample Name	Constituent(s)	Result	Qualifier	Reason
OWR-14D F	Total Polychlorinated biphenyls	<0.1 ug/L	UJ	RPD between original and duplicate not calculated due to a non-detect result
Field Duplicate 2 F	Total Polychlorinated biphenyls	0.1 ug/L	J	RPD between original and duplicate not calculated due to a non-detect result
OWR-14D F	Total Trichlorobiphenyls	<0.1 ug/L	UJ	RPD between original and duplicate not calculated due to a non-detect result
Field Duplicate 2 F	Total Trichlorobiphenyls	0.1	J	RPD between original and duplicate not calculated due to a non-detect result
Purge Water	PCB-1016	<0.5 ug/L	UJ	Low DCB recovery
Purge Water	PCB-1221	<0.5 ug/L	UJ	Low DCB recovery
Purge Water	PCB-1232	<0.5 ug/L	UJ	Low DCB recovery
Purge Water	PCB-1242	<0.5 ug/L	UJ	Low DCB recovery
Purge Water	PCB-1248	<0.5 ug/L	UJ	Low DCB recovery
Purge Water	PCB-1254	<0.5 ug/L	UJ	Low DCB recovery
Purge Water	PCB-1260	<0.5 ug/L	UJ	Low DCB recovery
Purge Water	PCB-1268	<0.5 ug/L	UJ	Low DCB recovery
T-18	PCB-1016	<0.5 ug/L	UJ	Low DCB recovery

QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)? <u>Duplicate 2: Original – OWR-14DF, Duplicate – Field Duplicate 2F</u>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Original – OWR-14D, Duplicate – Field</u>
b) Were field dup. precision criteria met (note RPD)? <u>Manganese= 6.1%. OWR-14DF and Field Duplicate 2F: Manganese= Not calculated (original= 0.022 mg/L, duplicate= ND)</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>OWR-14D and Field Duplicate 2:</u>
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
d) Were lab dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met? Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<u>No MS/MSD samples in this report</u>
b) Was MSD accuracy criteria met? Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Comments/Notes:

- (1) Manganese RPD of Method 6010C for OWR-14DF and Field Duplicate 2F was not calculated due to non-detect result; therefore, these analytes have been qualified as estimated J or UJ.

Data Qualification:

Sample Name	Constituent(s)	Result	Qualifier	Reason
OWR-14DF	Manganese	0.022 mg/L	J	RPD between original and duplicate not calculated due to a non-detect result
Field Duplicate 2F	Manganese	<0.01 mg/L	UJ	RPD between original and duplicate not calculated due to a non-detect result

QA LEVEL II - INORGANIC DATA EVALUATION CHECKLIST

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: GSI Environmental, Inc
Project/Site: Anniston CERCLA April 2020

Job ID: 680-197955-1

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1-	Surrogate recovery exceeds control limits, low biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative 680-197955-1

Comments

No additional comments.

Receipt

The samples were received on 4/22/2021 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 1.4° C, 1.8° C, 1.9° C, 2.0° C, 2.5° C, 2.8° C and 4.4° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8081B/8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following samples contained an allowable number of surrogate compounds outside limits: T-18 (680-197955-3), OWR-13 (680-197955-5) and Purge Water (680-197955-17). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Dioxin

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Dioxin Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: GSI Environmental, Inc
 Project/Site: Anniston CERCLA April 2020

Job ID: 680-197955-1

Laboratory: Eurofins TestAmerica, Savannah

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Alabama	State	41450	06-30-21

Laboratory: Eurofins Lancaster Laboratories Env, LLC

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Received extra samples not listed on COC.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 680-205852-1

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
*+	LCS and/or LCSD is outside acceptance limits, high biased.

GC Semi VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments

No additional comments.

Receipt

The samples were received on 10/13/2021 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 1.0° C, 2.9° C and 3.7° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270D: The following analyte has been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: o,o',o"-Triethylphosphorothioate. This analyte may have a %D >20% but must be <50%. If >50%, a CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

Method 8270D: The laboratory control sample and/or the laboratory control sample duplicate (LCS/LCSD) for preparation batch 680-689316 and analytical batch 680-690352 recovered outside control limits for the following analyte(s): o,o',o"-Triethylphosphorothioate. This analyte has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Method Summary

Client: GSI Environmental, Inc
Project/Site: Anniston RCRA April 2021

Job ID: 680-205852-1

Method	Method Description	Protocol	Laboratory
8260B	Volatile Organic Compounds (GC/MS)	SW846	TAL SAV
8270D	Semivolatile Organic Compounds (GC/MS)	SW846	TAL SAV
8081B/8082A	Organochlorine Pesticides and Polychlorinated Biphenyls by Gas Chromatography	SW846	TAL SAV
8141B	Organophosphorous Compounds by Gas Chromatography, Capillary Column Technique	SW846	TAL DEN
6010C	Metals (ICP)	SW846	TAL SAV
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	TAL SAV
3510C	Liquid-Liquid Extraction (Separatory Funnel)	SW846	TAL DEN
3520C	Liquid-Liquid Extraction (Continuous)	SW846	TAL SAV
5030B	Purge and Trap	SW846	TAL SAV

Protocol References:

Creator: Hartley, Tyler

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: RCRA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-205973-1
 Validation Date: 05 November 2021

Laboratory: Eurofins TestAmerica Savannah SDG #: 680-205973-1
 Analytical Method (type and no.): VOCs (8260B), SVOCS (8270D), PCBs (8081B/8082A), Pesticides (8141B)
 Matrix: Air Soil/Sed. Water Waste
 Sample Names: MW-16, MW-01B, MW-11A, TripBlank 20211013

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
f) Field QC noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>TripBlank 20211013</u>
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp., pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
j) Does the laboratory narrative indicate deficiencies?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
Note Deficiencies: _____				

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were hold times met for sample analysis?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
e) Were appropriate reporting limits achieved?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
f) Were any sample dilutions noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
g) Were any matrix problems noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>MW-16 sample matrix was light green.</u>

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were field dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>LCS/LCSD RPD = 2%</u>
d) Were lab dup. precision criteria met (note RPD)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<u>No MS/MSD samples in this report.</u>
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were MS/MSD precision criteria met?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Surrogate Spikes	YES	NO	NA	COMMENTS
a) Were surrogate recoveries within control limits? <u>Method 8081B/8082A= 20% (NFG QC lower limit= 30%)</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>DCB recovery in MW-16 and MW-01B for</u>
b) Were surrogate recoveries not calculated due to dilutions?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Comments/Notes:

- (1) NFG= National Functional Guidelines for Organic Superfund Methods Data Review.
- (2) Low recoveries of surrogate DCBP for Method 8081B/8082A in MW-16 and MW-01B occurred; therefore, non-detects have been qualified as UJ.

Data Qualification:

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Job ID: 680-205973-1

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.
S1+	Surrogate recovery exceeds control limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative 680-205973-1

Comments

No additional comments.

Receipt

The samples were received on 10/14/2021 10:30 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.0° C, 2.2° C and 4.6° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270D: The following analytes have been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: 4-Nitrophenol (-22.9%D) and o,o',o"-Triethylphosphorothioate (-20.4%D). These analytes may have a %D >20% but must be <50%. If >50%, a CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method 8081B/8082A: Two surrogates are used for this analysis. The laboratory's SOP allows one of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: MW-16 (680-205973-1). These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method 3510C: The following sample MW-16 (680-205973-1) was light green in color preparation batch 280-554136. Method: 614/8141A/8141B

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Login Sample Receipt Checklist

Client: GSI Environmental, Inc

Job Number: 680-205973-1

Login Number: 205973

List Number: 1

Creator: Hartley, Tyler

List Source: Eurofins TestAmerica, Savannah

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Company Name: GSI Environmental, Inc.
 Project Name: RCRA Groundwater Monitoring
 Reviewer: Jessica Alanis

Project Manager: Amy Weinberg
 Project Number: 680-206060-1
 Validation Date: 05 November 2021

Laboratory: Eurofins TestAmerica Savannah

SDG #: 680-206060-1

Analytical Method (type and no.): VOCs (8260B), SVOCS (8270D), PCBs (8081B/8082A), Pesticides (8141B)

Matrix: Air Soil/Sed. Water Waste

Sample Names: MW-12A, MW-15, Tripblank 20212014

NOTE: Please provide calculation in Comment areas or on the back (if on the back please indicate in comment areas).

Field Information	YES	NO	NA	COMMENTS
a) Sampling dates noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Sampling team indicated?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Sample location noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Sample depth indicated (Soils)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	
e) Sample type indicated (grab/composite)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
f) Field QC noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Tripblank 20211014, MS/MSD (@ MW-15)</u>
g) Field parameters collected (note types)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Temp., pH, turbidity, sp. cond., DO, ORP</u>
h) Field Calibration within control limits?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
i) Notations of unacceptable field conditions/performances from field logs or field notes?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
j) Does the laboratory narrative indicate deficiencies?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

Note Deficiencies: Method 8260B MS/MSD (@ MW-15) ran outside 12-hour tune window; however, recoveries were within acceptance limits, so no qualification is required. The RPD between the primary and confirmation column exceeded control limits in surrogates of Method 8081B/8082A for all samples; however, all recoveries were within acceptance limits, so no qualification is required.

Chain-of-Custody (COC)	YES	NO	NA	COMMENTS
a) Was the COC properly completed?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Was the COC signed by both field and laboratory personnel?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
c) Were samples received in good condition?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	

General (reference QAPP or Method)	YES	NO	NA	COMMENTS
a) Were hold times met for sample pretreatment?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
b) Were hold times met for sample analysis?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>Reanalysis of Method 8260B in MW-15 was performed just outside of holding time.</u>
c) Were the correct preservatives used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
d) Was the correct method used?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
e) Were appropriate reporting limits achieved?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
f) Were any sample dilutions noted?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	
g) Were any matrix problems noted?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Method 3510C (organic prep method) initial volumes deviated from standard procedure due to high density of the sample matrix in MW-12A.</u>

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

Blanks	YES	NO	NA	COMMENTS
a) Were analytes detected in the method blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were analytes detected in the field blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were analytes detected in the equipment blank(s)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
d) Were analytes detected in the trip blank(s)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Laboratory Control Sample (LCS)	YES	NO	NA	COMMENTS
a) Was a LCS analyzed once per SDG?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
b) Were the proper compounds included in the LCS?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
c) Was the LCS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Duplicates	YES	NO	NA	COMMENTS
a) Were field duplicates collected (note original and duplicate sample names)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Were field dup. precision criteria met (note RPD)?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____
c) Were lab duplicates analyzed (note original and duplicate samples)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<u>Multiple LCSDs, all RPDs ≤ 3%</u>
d) Were lab dup. precision criteria met (note RPD)?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____

Blind Standards	YES	NO	NA	COMMENTS
a) Was a blind standard used (indicate name, compounds included and concentrations)?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was the %D within control limits?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	_____

Matrix Spike/Matrix Spike Duplicate (MS/MSD)	YES	NO	NA	COMMENTS
a) Was MS accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
b) Was MSD accuracy criteria met?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	_____
Recovery could not be calculated since sample contained high concentration of analyte?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____
c) Were MS/MSD precision criteria met? <u>upper limit = 20%</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>PCB-1260 MS/MSD RPD = 39% (NFG QC</u>

Surrogate Spikes	YES	NO	NA	COMMENTS
a) Were surrogate recoveries within control limits? <u>8081B/8082A= 26% (NFG QC lower limit=30%)</u>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>DCB recovery in MW-12A for Method</u>
b) Were surrogate recoveries not calculated due to dilutions?	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	_____

Comments/Notes:

- (1) NFG= National Functional Guidelines for Organic Superfund Methods Data Review.
- (2) Method 8260B for MW-15 was reanalyzed outside of holding time so the result has been qualified as UJ.
- (3) MS/MSD RPD of PCB-1260 exceed acceptance limits in samples from MW-15; however, PCB-1260 was not detected in MW-15 so no qualification is required.

QA LEVEL II - ORGANIC DATA EVALUATION CHECKLIST

- (4) Marginally low recovery of surrogate DCB for Method 8081B/8082A in MW-12A occurred; therefore, non-detects are qualified as UJ.

Data Qualification:

Sample Name	Constituent(s)	Result	Qualifier	Reason
MW-15	Chlorobenzene	<1.0 ug/L	UJ	Reanalyzed outside of holding time
MW-12A	PCB-1016	<0.5 ug/L	UJ	Low DCB recovery
MW-12A	PCB-1221	<0.5 ug/L	UJ	Low DCB recovery
MW-12A	PCB-1232	<0.5 ug/L	UJ	Low DCB recovery
MW-12A	PCB-1242	<0.5 ug/L	UJ	Low DCB recovery
MW-12A	PCB-1248	<0.5 ug/L	UJ	Low DCB recovery
MW-12A	PCB-1254	<0.5 ug/L	UJ	Low DCB recovery
MW-12A	PCB-1260	<0.5 ug/L	UJ	Low DCB recovery
MW-12A	PCB-1268	<0.5 ug/L	UJ	Low DCB recovery

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: GSI Environmental, Inc
Project/Site: Anniston RCRA October 2021

Job ID: 680-206060-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time

GC Semi VOA

Qualifier	Qualifier Description
p	The %RPD between the primary and confirmation column/detector is >40%. The lower value has been reported.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative 680-206060-1

Comments

No additional comments.

Receipt

The samples were received on 10/15/2021 10:50 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.9° C, 1.7° C, 2.0° C and 3.7° C.

GC/MS VOA

Method 8260B: The matrix spike and/or The matrix spike duplicate ran outside of the 12 hour tune window. The recoveries were acceptable. The data has been qualified and reported.

MW-15 MS (680-206060-2[MS]) and MW-15 MSD (680-206060-2[MSD])

Method 8260B: Reanalysis of the following sample was performed outside of the analytical holding time due to the sample injecting just outside the 12 hour tune window in the first run: MW-15 (680-206060-2).

Method 8260B: The following sample injected 11 minutes outside of the 12 hour tune window. The sample was rerun out of hold. Both sets of data have been reported. MW-15 (680-206060-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method 8270D: The following analytes have been identified, in the reference method and/or via historical data, to be poor and/or erratic performers: 4-Nitrophenol (-22.9%D) and o,o',o"-Triethylphosphorothioate (-20.4%D). These analytes may have a %D >20% but must be <50%. If >50%, a CCV standard at or below the reporting limit (RL) was analyzed with the affected samples and found to be acceptable. As indicated in the reference method, sample analysis may proceed; however, any detection for the affected analyte(s) is considered estimated.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method 3510C: Due to the high density of the sample matrix (>1.0 g/mL), the initial volumes used for the following samples deviated from the standard procedure: MW-12A (680-206060-1). The reporting limits (RLs) have been adjusted proportionately preparation batch 280-554136. Method: 614/8141A/8141B

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Creator: Sims, Robert D

Question	Answer	Comment
Radioactivity wasn't checked or is <=/ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A
