Re: Interim Measures Final Design Drawings
Solutia Inc. Anniston, AL Facility
EPA ID No. ALD 004 019 048

Dear Mr. Hardy:

Attached are copies of the final design drawings for the Interim Measures that were constructed at the Solutia Anniston Facility in 1997. These drawings include all of the design revisions that were made during construction in response to conditions which were actually encountered in the field. An "as-built" construction report and a certification report for the upgrade to the cap on a portion of the South Landfill are currently being prepared and will be submitted to the Department as soon as they are complete.

The drawings are divided into five sections, as follows:

- Section 1 contains drawings showing the work carried out to divert stormwater run-on from the South Landfill and from the near-plant portion of AOC B. Drawings for piping to convey the diverted stormwater through AOC B are also included. This work was performed to fulfill the goals of Interim Measures No. 1 and 3, as described in our Interim Measures report submitted to you on March 31, 1998.

- Section 2 contains drawings for the upgrade of the cap on portions of the South Landfill (Interim Measure No. 2 in our report).

- Section 3 includes drawings for a soil cover to contain soils and sediments on Solutia-owned properties within portions of AOC B (Interim Measure No. 3 in our report).

- Section 4 contains a drawing showing the work that was carried out to upgrade the in-plant sewers (Interim Measure No.4).

- Section 5 includes the process flow diagrams for the piping necessary to divert non-contact cooling water to the in-plant water treatment facility (Interim Measure No. 4).

If you have any questions, please contact me at 205-231-8404.

Sincerely,
