Alan Fowler, Arcadis, Inc.  
**Date:** December 18, 2012  
**Re:** Snow Creek Dredge Spoil Pile Removal, 710 Pine Street Property, Anniston PCB Site, Anniston, Alabama

---

### Background

On October 15, 1998, Solutia Inc. submitted the *Dredge Spoil Area Evaluation Report*, prepared by Roux Associates, Inc., to the Hazardous Waste Branch of the Alabama Department of Environmental Management. The purpose of the report was to present the findings and proposed recommendations of the dredge spoil area evaluations conducted along Snow and Choccolocco Creeks.

Roux implemented several methods of investigation to identify and evaluate potential dredge spoil piles. Eight (8) potential areas were identified along the banks of Snow Creek. Area three (3) was partially located in the northwest corner of the property located at 710 Pine Street, Anniston, Alabama (parcel #2609/PPIN #63048), approximately 3,350 ft. from the confluence of the 11<sup>th</sup> Street Ditch and Snow Creek (Figure 1). The dredge spoil pile at this location reportedly had a length of 40 feet, a width of 13 feet, and a height of 7 feet.

One soil sample (SC-3) was collected from Area 3 in accordance with the *Dredge Spoil Area RFI/CS Work Plan* submitted by Roux on September 13, 1999. The sample was collected with the use of a post hole digger. Due to the size of Area 3 only one five point composite soil sample was collected.

The sample was submitted for polychlorinated biphenyl (PCB) analysis by United States Environmental Protection Agency (USEPA) Method SW846 8082 and total mercury by USEPA Method SW846 6010B. Based on the analytical data provided by Savannah Laboratories,

composite soil sample SC-3 was found to have a total PCB concentration of 24.9 milligrams per kilogram (mg/kg) and a total mercury concentration of 0.20 mg/kg.

**Dredge Spoil Pile Removal**

On June 10, 2009, the residential removal contractor Entact and Associates, LLC (Entact) initiated residential soil removal activities at 710 Pine Street. During the performance of removal activities at this property, Entact personnel identified a portion of the dredge spoil pile Area 3 in the northwest corner of the property (Attachment 1, Photograph 1). After conferring with the residential removal manager and reviewing the *Dredge Spoil Area RFI/CS Phase I Report* to identify the concentration of PCBs in this dredge spoil pile, a decision was made to remove the entire pile. The soil was loaded into roll-off boxes and staged before being transported to Three Corners Landfill for disposal (Attachment 1, Photograph 2). Between June 26 and July 11, 2009, Industrial Waste, Inc. transported approximately 143.5 tons of PCB impacted soil to Three Corners Landfill for disposal. The soil disposal manifests are included in Attachment 2. After the dredge spoil pile was removed, the area was restored in a similar manner to 710 Pine St. (Attachment 1, Photograph 3), i.e., installation of clean vegetated soil cover.
