

We're evolving recycled PET for circularity that performs.

Eastman and Doloop have joined forces to redefine what's possible in recycled PET packaging.

Combining Eastman's circular materials with Doloop's expertise in creating premium recycled PET preforms, our collaboration paves the way for PET bottles with 100% recycled plastic* and no compromise to performance or safety.

Together, we enable bottles that:

- Meet stringent food and beverage standards
- Seamlessly integrate with closed-loop deposit systems
- Preserve the integrity of the recycling stream

Discover how we're turning sustainability ambitions into scalable solutions — because with Eastman and Doloop, circularity no longer means compromise.
