Tritan™ Renew

Elevate your water bottle sustainability.

Renewed hydration at home and on the go

Eastman Tritan™ Renew copolyester is the trusted leader for superior water bottles. It outperforms other market options without compromising design aesthetics, so brands can bring more of the most innovative products to consumers with 50% certified recycled content.*

Clarity — Our crystal clear materials dazzle like glass and stay clear without clouding or yellowing. Tritan Renew can also be colored to achieve a number of effects.

Durability — Tritan Renew is nearly unbreakable and stands up to frequent use, so it's perfect for daily use on the go.

Lightweight — Take your water bottle everywhere without the extra weight of heavier materials like stainless steel or glass.

Dishwasher safe — Tritan Renew handles heat and maintains its premium aesthetic through repeated dishwasher cycles.

Food-contact ready — Our materials are free of all bisphenols, including BPA and BPS.

Odor and taste resistant — Bottles made with Tritan Renew are made for more than just water. Flavors won't carry over between washes or leave a metallic taste behind.

Total performance — While some alternatives work well in some performance areas, bottles made with Tritan Renew offer all-around excellence.

Good for you and the planet

This remarkable copolyester is made possible by Eastman's molecular recycling technology that transforms plastic waste into durable materials. This process breaks down hard-to-recycle plastic into its basic molecular building blocks, which allows plastic to be recycled again and again without degrading in quality.

Tritan Renew provides our manufacturing partners with a material made of 50% certified recycled content,* offsetting the use of fossil fuels and lowering greenhouse gas emissions.

*Recycled content is certified through ISCC mass balance allocation.
