

Serving drinks just got easier.

Eastman Tritan™ copolyester is the clear choice for the symGLASS pubWARE drinkware line.

After watching his bartenders break glass after glass, restaurateur Quinn O'Sullivan set out to find high quality, unbreakable drinkware that had the classic look and feel of glass. After an extensive search, the creators of symGLASS turned to clear, durable Eastman Tritan™ copolyester.

Tritan is a new generation polymer that has a unique balance of properties including outstanding clarity and toughness as well as design flexibility and chemical resistance. This makes Tritan the material of choice for the symGLASS pubWARE drinkware line because it doesn't require frequent replacing. Tritan allows the pubWARE products to keep the weight and heft of glass without the worry of breakage.

Unmatched performance

The glasses are also durable enough to withstand rigorous commercial dishwashing cycles without cracking and crazing. "One of the problems that most products have is when they get run through the dishwashing machine they are going to stress crack, cloud, discolor, and lose shape," said O'Sullivan. "One of the things we liked most about Tritan is that they don't have those same problems. They will stay as clear as the day that we bought them."

The unique line is available in six classic styles: tumbler, pint glass, wine glass, stemless wine glass, rocks glass, and shot glass.
